Salmons,Wim Vandenbussche,2025-04-21 Targeting a full range of students and scholars this volume provides a total of 50 chapters illustrating the linguistic dynamics and the dynamics of inter individual and societal language contact as well as the dynamics of multidisciplinary language contact studies Fueled by a wealth of data from a rich variety of contact situations its geographically balanced case studies are governed by the triangulation between a focus on language structure and change a sincere drive of sociopolitical and academic agency and the confrontation with an everyday reality that can be unkind to and ignorant of those two factors The volume clearly demonstrates the social relevance of our trade in a time burdened with ecolinguistic challenges

Exploring Digital Communication Caroline Tagg,2015-04-10 Routledge Introductions to Applied Linguistics is a series of introductory level textbooks covering the core topics in Applied Linguistics primarily designed for those beginning postgraduate studies or taking an introductory MA course as well as advanced undergraduates Titles in the series are also ideal for language professionals returning to academic study The books take an innovative practice to theory approach with a back to front structure This leads the reader from real world problems and issues through a discussion of intervention and how to engage

with these concerns before finally relating these practical issues to theoretical foundations Exploring Digital Communication aims to discuss real world issues pertaining to digital communication and to explore how linguistic research addresses these challenges The text is divided into three sections Problems and practices Interventions and Theory each of which is further divided into two subsections which reflect linguistic issues relating to digital communication The author seeks to demystify any perceived divide between online and offline communication arguing that issues raised in relation to digital communication throw light on language use and practices in general and thus linguistic interventions in this area have implications not only for users of digital communication but for linguists general understanding of language and society Including relevant research examples tasks and a glossary this textbook is an invaluable resource for postgraduate and upper undergraduate students taking New Media or Communication Studies modules within Applied Linguistics and English Language courses

What we learn and when we learn it: sensitive periods in development Etienne De Villers-Sidani, Virginia Penhune, 2014-11-21

The impact of training or experience is not the same at all points in development Children who receive music lessons or learn a second language before age 7-8 are more proficient as adults Early exposure to drugs or trauma makes people more likely to become addicted or depressed later in life Rat pups exposed to specific frequencies from 9-13 days post partum show expanded cortical representations of these frequencies Young birds must hear and copy their native song within 1-2 months of birth or they may never learn it at all These are examples of sensitive periods developmental windows where maturation and specific experience interact to produce differential long term effects on the brain and behavior While still controversial evidence for the existence of sensitive periods has grown as has our understanding of the underlying mechanisms of brain plasticity Behavioral evidence from studies of language psychopathology or vision in humans has been complemented by evidence elucidating molecular gene and hormonal mechanisms in animals It has been proposed that sensitive periods can be both opened and closed by specific experience and that there are multiple overlapping sensitive periods that occur throughout development as functions come on line It is also likely that experience dependent behavioral or brain plasticity accrued

during one sensitive period can serve as a scaffold on which later experience and plasticity can build Based on current knowledge there are a number of broad questions and challenges to be addressed in this domain these include generating new information about the neurobiological mediators of structural and functional changes proposing models of brain development that will better predict when sensitive periods should occur and what functions are implicated investigation of the interaction between experience during a sensitive period and pre existing individual differences and the relationship between experience during a sensitive period and on going experience The goal of this Research Topic is to bring together scientists in different fields whose work addresses these issues including animal and human developmental neuroscience language and cognitive development education developmental psychopathology and sensory neuroscience History of Soy Flour, Grits and Flakes (510 CE to 2013) William Shurtleff,Akiko Aoyagi,2013-12-01 The world s most comprehensive well document and well illustrated book on this subject With extensive index 28 cm Why Do Linguistics?
