A Sustainable Revolution Idiano D'Adamo, Pasquale Marcello Falcone, Michael Martin, Paolo Rosa, 2020-12-14 The parties of the United Nations Framework Convention on Climate Change UNFCCC attained the Paris Agreement to tackle climate change and to strengthen the actions required for a sustainable transition towards an environmentally friendly future. This transition will involve holistic approaches and multifaceted societal shifts requiring answers and collaboration between private public and academic sectors. This book gathers together contributions which study the transition towards a more sustainable future involving and identifying the development and implications of more sustainable alternatives in collaboration with all relevant stakeholders e.g. communities, firms, policy makers, researchers etc. to achieve this transition. The approaches proposed are all concerned with a common perspective: imaging our globe with a greener picture built upon a transversal sustainable revolution to clean up the Earth. *IAENG Transactions on Engineering Sciences* Sio-Iong Ao, Alan Hoi-Shou Chan, Hideki Katagiri, Li Xu, 2014-04-07 Two large international conferences on Advances in Engineering Sciences were held in Hong Kong March 13-15 2013 under the International MultiConference of Engineers and Computer Scientists IMECS 2013 and in London U.K. 3-5 July 2013 under the World Congress on Engineering 2013 WCE 2013 respectively. Parallel Computing: Accelerating Computational Science and Engineering (CSE) M. Bader, A. Bode, H.-J. Bungartz, 2014-03-31 Parallel computing has been the enabling technology of high end machines for many years. Now it has finally become the ubiquitous key to the efficient use of any kind of multi-processor computer architecture from smart phones, tablets, embedded systems and cloud computing up to exascale computers. This book presents the proceedings of ParCo2013, the latest edition of the biennial International Conference on Parallel Computing held from 10 to 13 September 2013 in Garching, Germany. The conference focused on several key parallel computing areas. Themes included parallel programming models for multi and manycore CPUs, GPUs, FPGAs and heterogeneous platforms; the performance engineering processes that must be adapted to efficiently use these new and innovative platforms; novel numerical algorithms and approaches to large scale simulations of problems in science and engineering. The conference programme also included twelve mini symposia including an industry session and a special PhD Symposium which comprehensively represented and intensified the discussion of current hot topics in high performance and parallel computing. These special sessions covered large scale supercomputing, novel challenges arising from parallel architectures, multi manycore heterogeneous platforms, FPGAs, multi level algorithms as well as multi scale multi physics and multi dimensional problems. It is clear that parallel computing including the processing of large data sets (Big Data) will remain a persistent driver of research in all fields of innovative computing which makes this book relevant to all those with an interest in this field.
