Nursing Case Study

I. Health History

The subject of my case study is W. R. WR, is a 75 year old white male who was admitted to Miami Care Hospital on November 23, 2002. Prior to being admitted to the hospital, W. R. had been in excellent health. His condition apparently began three weeks prior to being admitted. On November 23, W. R.'s son found him lying on the floor unresponsive and unable to arise.

Mr. R. was diagnosed as having an acute cerebral vascular accident. This disorder can also be described as a "stroke." It occurs when there is an interruption of normal blood flow to one or more of the blood vessels that supply the brain. Thrombosis, embolism, and hemorrhage are the primary causes of a CVA. (Jennerson and Johnson 2002) The tissues of the brain become ischemic, leading to hypoxia or anoxia with destruction or necrosis of the neurons, glia, and vasculature. Complications of CVA include unstable blood pressure, sensory and motor impairment, infection, pneumonia, contractures, and pulmonary emboli. CVA is the third leading cause of death in the United States and affects more than 100,000 Americans annually. (Jennerson and Johnson 2002)

He was widowed in December of 2001, one daughter has coronary artery disease, one son died of an MI at age 37, and one son died with lung cancer at 37. He had been the primary care giver of his daughter until she was admitted to the hospital three weeks ago. She is dying with a short bowel syndrome and colitis and is now being taken care of in hospice. Since after being told about Mr. R.'s appetite decreased and he had become congested. He was placed on Folic to treat symptoms of depression. He had also been taking Cipra for congestive. Also his family noticed that he was suffering from confusion. As a result, they brought him into the Emergency Room for evaluation. The Emergency Room doctor
