

Tie Rod End / Steering Inspection

1. Elevate front end of ATV so front wheels are off the ground. Check for any looseness in front hub / wheel assembly by grasping the tire firmly at top and bottom first, and then at front and rear. Try to move the wheel and hub by pushing inward and pulling outward.

2. If abnormal movement is detected, inspect the hub and wheel assembly to determine the cause.
3. Remove the front wheels.
4. Grasp the steering tie rod and pull in all directions feeling for movement in the tie rod end.

5. Repeat inspection for inner tie rod end (on steering post).

6. Replace any worn steering components. Steering should move freely through entire range of travel without binding.

Wheel Alignment

WARNING

Severe injury or death can result from improper toe alignment and adjustment.
All tie rod adjustments should be performed by an authorized Polaris dealer.

Use the following procedure to check the toe alignment of the vehicle. The recommended toe alignment is 1/8" to 1/4" (3-6 mm) toe out.

1. Set the handlebars in a straight-ahead position.

NOTE: The steering arm can be used as an indicator of whether the handlebars are straight. The arm should always point straight back from the steering post.

2. Place the stands in front of the vehicle, perpendicular to the rear tires.
3. Tie an elastic string around the stands, making sure the string just touches the side surface of the rear tires on each side of the vehicle and goes around the stands in front of the vehicle.
