C. Ibata-Arens,2019-04-16 The biomedical industry which includes biopharmaceuticals genomics and stem cell therapies and
medical devices is among the fastest growing worldwide While it has been an economic development target of many national
governments Asia is currently on track to reach the epicenter of this growth What accounts for the rapid and sustained
economic growth of biomedical in Asia To answer this question Kathryn Ibata Arens integrates global and national data with
original fieldwork to present a conceptual framework that considers how national governments have managed key factors
like innovative capacity government policy and firm level strategies Taking China India Japan and Singapore in turn she
compares each country s underlying competitive advantages What emerges is an argument that countries pursuing
networked technonationalism NTN effectively upgrade their capacity for innovation and encourage entrepreneurial activity
in targeted industries In contrast to countries that engage in classic technonationalism like Japan s developmental state
approach networked technonationalists are global minded to outside markets while remaining nationalistic within the
domestic economy By bringing together aggregate data at the global and national level with original fieldwork and drawing
on rich cases Ibata Arens telegraphs implications for innovation policy and entrepreneurship strategy in Asia and beyond
