Future,2007-10-01 Natural and human induced changes in Earth's interior, land surface, biosphere, atmosphere and oceans affect all aspects of life. Understanding these changes requires a range of observations acquired from land, sea, air and space based platforms. To assist NASA, NOAA and USGS in developing these tools, the NRC was asked to carry out a decadal strategy survey of Earth science and applications from space that would develop the key scientific questions on which to focus Earth and environmental observations in the period 2005-2015 and beyond and present a prioritized list of space programs, missions and supporting activities to address these questions. This report presents a vision for the Earth science program, an analysis of the existing Earth Observing System and recommendations to help restore its capabilities, an assessment of and recommendations for new observations and missions for the next decade, an examination of and recommendations for effective application of those observations and an analysis of how best to sustain that observation and applications system.
