% Example 10.1: Randomly generated data
% This example illustrates the use of the MATLAB
% function 'rand' to generate random data.
% The data is generated in a 2D space.
% The data is then used to train a linear classifier.
% The classifier is then used to classify new data.
% The results are displayed on the screen.

% Generate random data
N = 100; % Number of data points
X = rand(N, 2); % Generate random data
Y = randi([1 2], N, 1); % Generate random labels

% Train a linear classifier
[weights, bias] = train(X, Y);

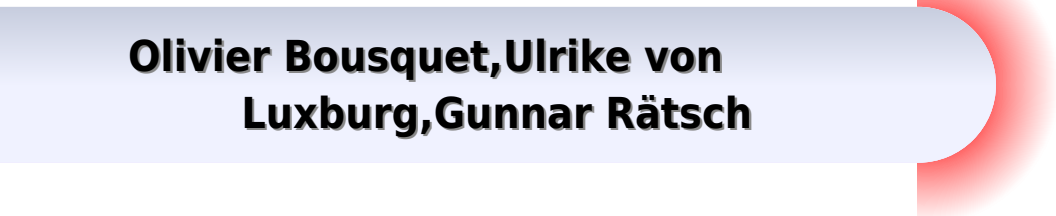

% Classify new data
X_test = rand(100, 2); % Generate test data
Y_test = randi([1 2], 100, 1); % Generate test labels
[~, predicted_Y] = classify(X_test, weights, bias);

% Display results
fprintf('Number of correct classifications: %d\n', sum(Y_test == predicted_Y));

learning sciences models for testing purposes as well as the latest statistical and technological know how for designing scoring and interpreting results Written by an international team of contributors at the cutting edge of cognitive psychology and educational measurement under the editorship of a research director at the Educational Testing Service and an esteemed professor of educational psychology at the University of Alberta as well as supported by an expert advisory board Covers conceptual frameworks modern methodologies and applied topics in a style and at a level of technical detail that will appeal to a wide range of readers from both applied and scientific backgrounds Considers emerging topics in cognitively grounded assessment including applications of emerging socio cognitive models cognitive models for human and automated scoring and various innovative virtual performance assessments Advanced Parallel Processing Technologies Xingming Zhou, Stefan Jähnichen, Ming Xu, Jiannong Cao, 2003-09-09 This volume contains the papers presented at the 5th International Workshop on Advanced Parallel Processing Technologies APPT 2003 This series of workshops is designed to strengthen the cooperation between the German and Chinese institutions active in the area of these technologies It has continued to grow providing an excellent forum for reporting advances in parallel processing technologies The 5th workshop itself addressed the entire gamut of related topics ranging from the architectural aspects of parallel computer hardware and system software to the applied technologies for novel applications For this workshop we received over 191 full submissions from researchers all over the world All the papers were peer reviewed in depth and qualitatively graded on their relevance originality significance presentation and the overall appropriateness for their acceptance Any concerns raised were discussed in the program committee The organizing committee did an excellent job in selecting 78 papers Among them 21 were short ones for presentation In short the papers included here represent the forefront of research from China Germany and the other countries **Arpanet Resources Handbook** ,1978 **Handbook of Ambient Intelligence and Smart Environments** Hideyuki Nakashima, Hamid Aghajan, Juan Carlos Augusto, 2009-10-01 Our homes anticipate when we want to wake up Our computers predict what music we want to buy Our cars adapt to the way we drive In today s world even washing machines rice cookers and toys have the capability of autonomous decision making As we grow accustomed to computing power embedded in our surroundings it becomes clear that these smart environments with a number of devices controlled by a coordinating system capable of ambient intelligence will play an ever larger role in our lives This handbook provides readers with comprehensive up to date coverage in what is a key technological field Systematically dealing with each aspect of ambient intelligence and smart environments the text covers everything from visual information capture and human computer interaction to multi agent systems network use of sensor data and building more rationality into artificial systems The book also details a wide range of applications examines case studies of recent major projects from around the world and analyzes both the likely impact of the technology on our lives and its ethical implications With a wide variety of separate disciplines all conducting research relevant to this field this handbook encourages collaboration between disparate

researchers by setting out the fundamental concepts from each area that are relevant to ambient intelligence and smart environments providing a fertile soil in which ground breaking new work can develop *Predicting Malicious Behavior* Gary M. Jackson, 2012-05-25 A groundbreaking exploration of how to identify and fight security threats at every level This revolutionary book combines real world security scenarios with actual tools to predict and prevent incidents of terrorism network hacking individual criminal behavior and more Written by an expert with intelligence officer experience who invented the technology it explores the keys to understanding the dark side of human nature various types of security threats current and potential and how to construct a methodology to predict and combat malicious behavior The companion CD demonstrates available detection and prediction systems and presents a walkthrough on how to conduct a predictive analysis that highlights proactive security measures Guides you through the process of predicting malicious behavior using real world examples and how malicious behavior may be prevented in the future Illustrates ways to understand malicious intent dissect behavior and apply the available tools and methods for enhancing security Covers the methodology for predicting malicious behavior how to apply a predictive methodology and tools for predicting the likelihood of domestic and global threats CD includes a series of walkthroughs demonstrating how to obtain a predictive analysis and how to use various available tools including Automated Behavior Analysis *Predicting Malicious Behavior* fuses the behavioral and computer sciences to enlighten anyone concerned with security and to aid professionals in keeping our world safer *Information Systems Security and Privacy* Paolo Mori, Steven Furnell, Olivier Camp, 2018-06-11 This book constitutes the revised selected papers of the Third International Conference on Information Systems Security and Privacy ICISSP 2017 held in Porto Portugal in February 2017 The 13 full papers presented were carefully reviewed and selected from a total of 100 submissions They are dealing with topics such as vulnerability analysis and countermeasures attack patterns discovery and intrusion detection malware classification and detection cryptography applications data privacy and anonymization security policy analysis enhanced access control and socio technical aspects of security *Automated Biometrics* David Zhang, 2000-05-31 Biometrics based authentication and identification are emerging as the most reliable method to authenticate and identify individuals Biometrics requires that the person to be identified be physically present at the point of identification and relies on something which you are or you do to provide better security increased efficiency and improved accuracy Automated biometrics deals with physiological or behavioral characteristics such as fingerprints signature palmprint iris hand voice and face that can be used to authenticate a person s identity or establish an identity from a database With rapid progress in electronic and Internet commerce there is also a growing need to authenticate the identity of a person for secure transaction processing Designing an automated biometrics system to handle large population identification accuracy and reliability of authentication are challenging tasks Currently there are over ten different biometrics systems that are either widely used or under development Some automated biometrics such as fingerprint identification and speaker verification have received

considerable attention over the past 25 years and some issues like face recognition and iris based authentication have been studied extensively resulting in successful development of biometrics systems in commercial applications However very few books are exclusively devoted to such issues of automated biometrics Automated Biometrics Technologies and Systems systematically introduces the technologies and systems and explores how to design the corresponding systems with in depth discussion The issues addressed in this book are highly relevant to many fundamental concerns of both researchers and practitioners of automated biometrics in computer and system security

Contrast Craig A. Coppock, 2007 This guidebook illustrates the basic concepts involved in the science of fingerprints and fingerprint identification It clarifies many of the oversimplified generalities that pervade the science of fingerprint identification and highlights the many possibilities and limitations of fingerprint identification Chapters are arranged logically to facilitate greater knowledge and skills The second edition highlights the full breadth of OC Dactylscopy OCO the science of friction skin individualization A full explanation of forensic science OCOs comparative methodology Analysis Comparison Evaluation and Verification process or ACE V is reviewed A detailed narrative of the Daubert requirements is provided and how these new procedural directives cover the admission of scientific evidence and expert testimony The guide also offers ideas for upgrading standard operational office procedures relating to fingerprint comparisons and is followed by a training outline This outline will allow 10 print and latent print examiners to reach their full potential as specialized experts A new glossary offers 356 comprehensive definitions of fingerprint terms The chapters are liberally illustrated to aid the reader The book is designed to be read in its entirety or to be referenced as a guidebook as many concepts and information are repeated and cross referenced The information helps the reader to understand the relationships benefits and limitations of crime scene fingerprint evidence Contrast will be an excellent quick reference source and is intended for new and experienced crime scene investigators patrol officers attorneys and criminal justice students who seek to add fingerprint identification to their investigative skills

Computer Recognition Systems Marek Kurzynski, Edward Puchala, Michal Wozniak, Andrzej Zolnierrek, 2007-12-13 th This book contains papers accepted for presentation at the 4 International Conference on Computer Recognition Systems CORES 05 May 22 25 2005 Rydzyna Castle Poland This conference is a continuation of a series of conferences on similar topics KOSYR organized each second year since 1999 by the Chair of Systems and Computer Networks Wroclaw University of Technology An increasing interest to those conferences paid not only by home but also by foreign participants inspired the organizers to transform them into conferences of international range Our expectations that the community of specialists in computer recognizing systems will find CORES 05 a proper form of maintaining the tradition of the former conferences have been confirmed by a large number of submitted papers Alas organizational constraints caused a necessity to narrow the acceptance criteria so that only 100 papers have been finally included into the conference program The area covered by accepted papers is still very large and it shows how vivacious is scientific activity in the domain of computer recognition methods and systems It

contains various theoretical approaches to the recognition problem based on mathematical statistics fuzzy sets morphological methods wavelets syntactic methods genetic algorithms artificial neural networks ontological models etc Most attention is still paid to visual objects recognition however acoustic textual and other objects are also considered Among application areas medical problems are in majority recognition of faces speech signals and textual information processing methods being also investigated
