

11.3 Other Patterns of Inheritance

Biology 5.0

Name: _____

Date: _____ Period: _____

Lesson Objectives

- Describe the other patterns of inheritance.
- Explain the relationship between genes and the environment.

Lesson Summary

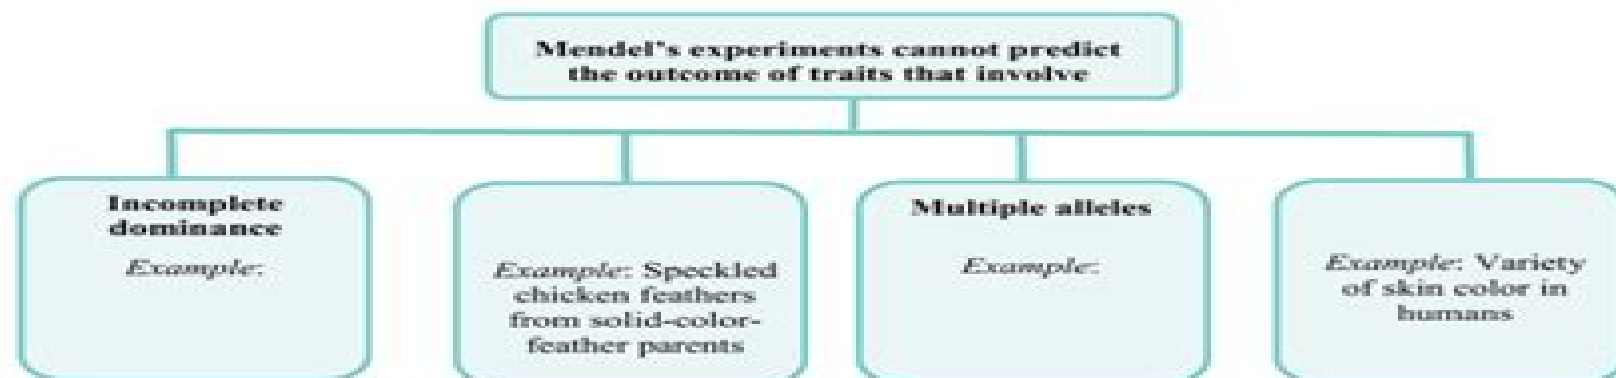

Beyond Dominant and Recessive Alleles Some alleles are neither dominant nor recessive:

- In cases of **incomplete dominance**, neither allele is completely dominant over the other. The phenotype is a blend of the two homozygous phenotypes.
- In cases of **codominance**, both alleles in the heterozygous genotype are expressed in the phenotypes.
- Genes with **multiple alleles** have more than two forms of the same gene. There may be more than one dominant form and several different phenotypes.
- **Polygenic traits** are controlled by the interaction of two or more genes and exhibit a wide range of phenotypes.

Genes and the Environment: The phenotype of an organism results only partly from its genotype. Environmental conditions can affect how genes are expressed.

Beyond Dominant and Recessive Alleles

1. Complete the graphic organizer to summarize exceptions to Mendel's principle.

For Questions 2–8, write True if the statement is true. If the statement is false, change the underlined word to make the statement true.

- _____ 2. When offspring show a blend of the parents' traits, one allele is dominant over the other.
- _____ 3. In complete dominance, the heterozygous phenotype lies somewhere between the two homozygous phenotypes.
- _____ 4. A heterozygous individual that exhibits the traits of both parents is an example of codominance.
- _____ 5. Many genes exist in several forms and are said to have codominant alleles.
