Kinkade,1996-03-01 This thesis analyzes potential uses of automatic identification technologies to support Army forces on future battlefields The thesis emphasizes radio frequency RF tag systems but also presents an overview and comparison of six other automatic

identification technologies bar codes optical character recognition magnetic stripe smart cards optical cards and voice recognition The dynamics shaping the Army of the future the characteristics of that Army and the characteristics of the logistics system that will support it are discussed Given those characteristics potential logistic uses of automatic identification technologies AIT are considered Recent Army applications are presented and the results and lessons learned evaluated The thesis concludes that AIT can play a central role in future Army logistics in particular if effectively coupled with existing Army systems AIT can provide commanders and logisticians with invaluable knowledge about the location and status of essential materiel and its expected arrival time at the desired location In the information age this level of knowledge may make the difference between success or failure on the battlefield

Tracking Next-Generation Automatic Identification Technology (AIT) Into 2035 - RFID Radio Frequency Tags, Efficient Logistics Operations, In-Transit Visibility, Enhanced Situational Awareness U. S. Military,Department of Defense (DoD),U. S. Government,2017-05-19

This paper explores the advances in automatic identification technology specifically radio frequency identification and seeks to exploit these capabilities for use in the Department of Defense DOD supply chain Using technological trends a thorough literature review and the opinions of experts the paper compares current technology to a 2035 requirements forecast to identify capability gaps The end goal is logistics situational awareness whereby the DOD has the ability to provide end to end visibility throughout its supply chain and can rapidly mobilize deploy sustain and redeploy forces in support of national security objectives A common axiom in military circles is that amateurs study strategy but professionals study logistics Throughout history wars have been won or lost depending on a nation s ability to support and sustain a fielded force Just ask the Nazis who during World War II could not sustain the German war machine because of Allied destruction of logistical lines The lessons to be learned today though similar are attenuated because of advances in technology a globalized world economy and interdependencies of nations waging war Likewise in a resource constrained environment nations and companies are looking for ways to cut costs improve quality increase efficiencies and enhance their competitiveness It is no different for the Department of Defense DOD especially in the area of global mobility and combat support In fact it is safe to say that logistics situational awareness is a critical enabler of global mobility and will dictate whether countries survive in the future strategic environment Today the logistics tail of the DOD is ripe for improvement Efficiencies in the daily movement of personnel cargo and equipment will effect large returns on investment Most importantly the ability to provide end to end visibility throughout the DOD supply chain will permit forces to rapidly mobilize deploy sustain and redeploy in support of national security objectives This paper surveys the current automatic identification technology AIT capabilities forecasts the 2035 requirements using environmental scanning and interviews identifies the capability gaps and provides inputs for an AIT implementation road map The key question is how will the DOD leverage AIT and help optimize the visibility of assets in the

DOD supply chain for operations in 2035 DOD investments in AIT will promote efficient logistics operations streamline supply chains provide in transit visibility and enhance situational awareness to enable rapid global mobility agile combat support and power projection for the DOD in 2035 Automatic Identification Technologies (AIT), Insuring Quality Throughout DOD Logistics Applications of Automated Marking and Reading Symbols, Microcircuit Technology in Logistics Applications, United States Air Force Academy, United States. An Analysis of Automatic Identification Technology Applications in Naval Logistics David M. Watt, 1997 This thesis evaluates potential uses of automatic identification technologies AIT in support of Naval logistics AIT includes a range of technologies and techniques which incorporate the rapid and accurate capture of data and its subsequent processing for cognitive recognition and identification An introduction to the various AIT system components from the well established bar coding technology to the more versatile radio frequency identification RFID technology is presented Additionally the underlying fundamentals of Naval logistics principles functions and elements are discussed including how these themes translate into promising potential uses of AIT Recent Naval AIT applications are featured and the results and lessons learned evaluated In this era of joint operations and use of coalition forces this work places emphasis on compatibility interoperability and the importance of enforcing standardization of AIT symbologies in the commercial and military sectors The DoD is in the midst of great change and restructuring especially in the area of logistics This study provides Naval logistics stakeholders a broad overview of the prevalent MT system component capabilities and limitations An AIT implementation model is also featured that delineates the various program elements which have significant impact on the efficiency and effectiveness of procured AIT systems A thorough understanding of the technology and its associated integration issues should enable Naval leadership to make sound AIT acquisitions
