States of Matter: Solid, Liquid, Gas

In the world around us, everything is made up of tiny particles called molecules. These molecules are always present in different ways to create three main states of matter: solid, liquid and gas. Each has some different characteristics and they change between them.

Solid: Imagine a brick or a box. Solids are made of many, many tiny particles. These tiny particles are packed very closely together. They are held together by strong forces, and they don't move around much.

Liquid: Now think about water. It flows and takes the shape of its container. In liquids, the molecules are not packed as closely together as in solids. They can move around a bit, but they still stay close together.

Gas: Think about air or steam. It fills all around you. Gas particles move very fast. They are not held together by strong forces. They can move around freely and they fill the space around them. They are in constant motion, and they can change their shape and size very easily.

Changing States: Have you ever seen ice melting? Or water boiling? These are changes from one state of matter to another. When ice melts, it changes from a solid to a liquid. When water boils, it changes from a liquid to a gas. These changes happen because of heat. This change is called **melting**.

Think about steam. When you boil water, it turns into steam. This is called **boiling**. When you freeze water, it turns into ice. This is called **freezing**. These changes happen because of heat. This change is called **boiling**.

When you change from one state to another, you are changing the way the molecules are packed. This process is called **condensation**. For example, when you breathe out, you can see a cloud of steam. This is because the water vapor in your breath is condensing into tiny droplets.

Now, think about the changes from one state to another. What happens when you freeze? What happens when you boil? What happens when you melt? What happens when you condense? These are all changes from one state to another.
