Management Association, Information Resources,2021-02-05 Mobile technologies have become a staple in society for their accessibility and diverse range of applications that are continually growing and advancing Users are increasingly using these devices for activities beyond simple communication including gaming and e commerce and to access confidential information including banking accounts and medical records While mobile devices are being so widely used and accepted in daily life and subsequently housing more and more personal data it is evident that the security of these devices is paramount As mobile applications now create easy access to personal information they can incorporate location tracking services and data collection can happen discreetly behind the scenes Hence there needs to be more security and privacy measures enacted to ensure that mobile technologies can be used safely Advancements in trust and privacy defensive strategies and steps for securing the device are important foci as mobile technologies are highly popular and rapidly developing The Research Anthology on Securing Mobile Technologies and Applications discusses the strategies methods and technologies being employed for security amongst mobile devices and applications This comprehensive book explores the security support that needs to be required on mobile devices to avoid application damage hacking security breaches and attacks or unauthorized accesses to personal data The chapters cover the latest technologies that are being used such as cryptography verification systems security policies and contracts and general network security procedures along with a look into cybercrime and forensics This book is essential for software engineers app developers computer scientists security and IT professionals practitioners stakeholders researchers academicians and students interested in how mobile technologies and applications are implementing security protocols and tactics amongst devices *Advances in Information and Communication* Kohei Arai,2022-03-11 The book *Advances in Information and Communication Networks Proceedings of the 2022 Future of Information and Communication Conference FICC* aims in presenting the latest research advances sharing expert knowledge and exchanging ideas with the common goal of shaping the future of Information and Communication The conference

attracted 402 submissions of which 131 submissions including six poster papers have been selected through a double blind review process by an international panel of expert referees This book discusses on aspects of Communication Data Science Ambient Intelligence Networking Computing Security and Internet of Things from classical to intelligent scope The intention is to help academic pioneering researchers scientists industrial engineers and students become familiar with and stay abreast of the ever changing technology surrounding their industry We hope that readers find the volume interesting and valuable it gathers chapters addressing state of the art intelligent methods and techniques for solving real world problems along with a vision of the future research Ad-hoc, Mobile, and Wireless Networks Nathalie Mitton,Valeria

Loscri,Alexandre Mouradian,2016-06-17 This book constitutes the proceedings of the 15th International Conference on Ad Hoc Networks and Wireless ADHOC NOW 2016 held in Lille France in July 2016 The 23 full papers presented together with one short paper in this volume were carefully reviewed and selected from 64 submissions The contributions are organized in topical sections named resource allocation theory and communications PHY MAC routing in sensors IoT DTN opportunistic networks sensors IoT security VANET and ITS and robots and MANETs *Probabilistic modeling for sensor fusion with inertial measurements* Manon Kok,2016-12-15 In recent years inertial sensors have undergone major developments The quality of their measurements has improved while their cost has decreased leading to an increase in availability They can be found in stand alone sensor units so called inertial measurement units but are nowadays also present in for instance any modern smartphone in Wii controllers and in virtual reality headsets The term inertial sensor refers to the combination of accelerometers and gyroscopes These measure the external specific force and the angular velocity respectively Integration of their measurements provides information about the sensor s position and orientation However the position and orientation estimates obtained by simple integration suffer from drift and are therefore only accurate on a short time scale In order to improve these estimates we combine the inertial sensors with additional sensors and models To combine these different sources of information also called sensor fusion we make use of probabilistic models to take the uncertainty of the different sources of information into account The first contribution of this thesis is a tutorial paper that describes the signal processing foundations underlying position and orientation estimation using inertial sensors In a second contribution we use data from multiple inertial sensors placed on the human body to estimate the body s pose A biomechanical model encodes the knowledge about how the different body segments are connected to each other We also show how the structure inherent to this problem can be exploited This opens up for processing long data sets and for solving the problem in a distributed manner Inertial sensors can also be combined with time of arrival measurements from an ultrawideband UWB system We focus both on calibration of the UWB setup and on sensor fusion of the inertial and UWB measurements The UWB measurements are modeled by a tailored heavy tailed asymmetric distribution This distribution naturally handles the possibility of measurement delays due to multipath and non line of sight conditions while not allowing for the possibility of measurements arriving early i

e traveling faster than the speed of light Finally inertial sensors can be combined with magnetometers We derive an algorithm that can calibrate a magnetometer for the presence of metallic objects attached to the sensor Furthermore the presence of metallic objects in the environment can be exploited by using them as a source of position information We present a method to build maps of the indoor magnetic field and experimentally show that if a map of the magnetic field is available accurate position estimates can be obtained by combining inertial and magnetometer measurements **Mensch und Computer 2015 - Workshopband** Anette Weisbecker, Michael Burmester, Albrecht Schmidt, 2015-09-14 The Workshop Volume from the Humans and Computers Conference documents the advanced tutorials that were presented to deepen the understanding gained from the conference lectures It presents case studies along with accompanying exercises **Graphic Showbiz** Adwoa Serwaa, 2014-12-15 **Financial Cryptography and Data Security** Rainer Böhme, Tatsuki Okamoto, 2015-07-15 This book constitutes the thoroughly refereed post conference proceedings of the 19th International Conference on Financial Cryptography and Data Security FC 2014 held in San Juan Puerto Rico in January 2015 The 23 revised full papers and 10 short papers were carefully selected and reviewed from 102 full papers submissions The papers are grouped in the following topical sections sidechannels cryptography in the cloud payment and fraud detection authentication and access control cryptographic primitives mobile security privacy and incentives applications and attacks authenticated data structures Smartphone-Based Detection Devices Chaudhery Mustansar Hussain, 2021-08-21 Smartphone usage has created a new means for detection analysis diagnosis and monitoring through the use of new apps and attachments These breakthrough analytical methods offer ways to overcome the drawbacks of more conventional methods such as the expensive instrumentation that is often needed complex sample pre treatment steps or time consuming procedures Smartphone Based Detection Devices Emerging Trends in Analytical Techniques gathers these modern developments in smartphone analytical methods into one comprehensive source covering recent advancements in analytical tools while paying special attention to the most accurate highly efficient approaches Serving as a guide not only to analytical chemists but also to environmentalists biotechnologists pharmacists forensic scientists and toxicologists Smartphone Based Detection Devices Emerging Trends in Analytical Techniques is an important source for researchers who require accurate analysis of their on and off site samples Students in these fields at the graduate and post graduate level will also benefit from this topical and comprehensive book Provides an integrated approach for advanced analytical methods and techniques using smartphones Covers the usage of smartphones in sample prep integration and detection stages of analytical chemistry Applicable for researchers of all levels from graduate students to professionals **Interactive Collaborative Robotics** Andrey Ronzhin, Gerhard Rigoll, Roman Meshcheryakov, 2018-09-10 This book constitutes the proceedings of the Third International Conference on Interactive Collaborative Robotics ICR 2018 held in Leipzig Germany in September 2018 as a satellite event of the 20th International Conference on Speech and Computer SPECOM 2018 The 30 papers presented in this

Recital Marianne MacRae,2025-03-17 The debut poetry collection from Marianne MacRae which combines surreal imagination with a dark undercurrent of loss The laughs aren t an escape from grief but a life giving force through it There is more wit and invention in a single poem by MacRae than quite a lot of entire bookshelves Perfectly balanced surreal interludes bravura exercises in voice comedy pushed to its harsh extremes and increasingly stricken moving This is not the imagination as an escape but a negotiation one that s still going on and it s a privilege to be a part of it as it consoles troubles and reinvents Unmissable work Luke Kennard Darkly hilarious and deliciously surreal this collection will thrill and unsettle you with the originality and sneaky vigour of its language If the Mighty Boosh and Paul Celan somehow had a poetic baby then this would be it A startling potent new voice to watch in British poetry Rebecca Tam s Marianne MacRae s poems are among the sharpest and funniest you could hope to read Their imaginative boldness and their crisp linguistic dexterity are a delight One is constantly kept on one s toes through the poetry s heady swerves and vivid dynamism The way in which she sounds out the depths through her brilliant surfaces is wonderfully managed As one of her poems says Put simply wow And wow again Alan Gillis I ve been trying to think of the perfect way to describe Marianne MacRae s poetry and what comes to mind are words like absurd delicious bittersweet tickling sumptuous barbed laughing through tears I keep thinking of those lemon candies that are wildly devilishly fabulously sour at first and which turn addictively sweet if you dare to keep sucking on them The pain here is always askew the writer pushes herself and the reader to keep glancing above beyond the easy summing up of experience to something more complex and real She writes You should feel free to question continually the space in which you exist and these poems do that while elbowing you in the ribs Brilliant JL Williams
