Multi-stage Feedback Control Design for Multi-time-scale System Ravindra Munje,Balasaheb Patre,Weidong Zhang,2024-08-23 This book presents multi stage feedback control designs for the system with multi time scale behaviour both in the continuous time domain and discrete time domain Multi time scale systems have widely separated clusters of eigenvalues making the system matrices ill conditioned Due to this the direct design of a feedback controller and reduced or full order observers for such systems is a challenging task Hence the feedback controllers and observers are designed in multiple design stages i e two stage design for the two time scale system and three stage design for the three time scale system In this book multi stage feedback controller and observer designs are proposed for the three time scale system to reduce offline and online computational efforts The applicability of these methods is demonstrated by simulating practical systems like a coal fired power plant and a nuclear power plant This book also discusses the design of multi stage feedback controllers in discrete time The design of state feedback control for a multi time scale system with a lower sampling rate fails to capture information in the fastest very fast and fast states While sampling at a higher rate increases computation time Thus the use of single rate sampling for such systems is unsuitable Therefore multi rate state feedback controllers are designed for the multi time scale system in which slow fast and very fast states are sampled at different sampling rates As slow fast and very fast states are the decoupled and internal states of the original system these are estimated by the sequential multi stage observers Applications of these multirate designs to the numerical examples are demonstrated and simulations are compared with single rate sampling methods The methods suggested in this book result in considerable savings in online and offline computations reduction in design complexity and improvement in robustness and closed loop performance This book can be beneficial to mathematicians scientists researchers and practicing

ASSESSMENT OF WETLAND CONDITION AND WETLAND MAPPING ACCURACY IN UPPER BLACKS FORK AND SMITHS FORK, UINTA MOUNTAINS, UTAH Diane Menuz,Ryhan Sempler,Jennifer Jones,2016-07-15 The Utah Geological Survey surveyed 28 sites in 2014 to quantify the location and condition of wetlands on the north slope of the Uinta Mountains in the Upper Blacks Fork and Smiths Fork watersheds The three project goals were to compare accuracy of different wetland mapping techniques assess wetland condition at randomly selected field sites and develop a landscape model to predict wetland condition Field mapping resulted in 6 2% and 13 1% less wetland area than mapping conducted by the National Wetland Inventory and the U S Forest Service respectively Sites were at or near pristine condition based on most field measures though sites did show evidence of disturbance from grazing and non native plant species Landscape model results indicate that sites further from roads closer to trails and within the wilderness boundary generally had healthier plant community composition measures While wetlands in the study area are overall in good condition we recommend follow up work to better quantify the impact of livestock grazing on wetlands in the area using study sites with

well understood levels of grazing intensity
