

NOTE

Make sure the selector switch is in the "OFF" position. Refer to Fig. 28 for this section.

1. Turn "on" the 115 volt power supply to the RV.
2. To check the FAN operation turn the selector switch to FAN ONLY on the Elect-A-Heat models or to either of the two Fan positions on the 6723A714 model. When this is done the fan should run continuously. The thermostat does not operate when the air conditioner is in Fan operation.
3. To check the cooling operation turn the selector switch to "Cooling" position and the thermostat to "Colder". The fan and compressor should both run.

NOTE

For Compressor operation the room temperature must be above the lowest thermostat setting (Approximately 58°F.) if the temperature is below this

setting the compressor will not start. Also, in the cooling mode the thermostat controls only the compressor operation.

4. To check a model with Elect-A-Heat, turn the selector switch to "Heat" and the thermostat to "Warmer". Check the Heat output. (To shorten the check out time, push the damper handle to "Air Volume Lo").

NOTE

For heating, the thermostat is factory adjusted to cycle "off" when the return air temperature is between 80° and 85°F. If the electric heat does not come on, it is likely that the coach temperature is over 80°F.

To actuate the heater for operation check out under this condition, run the air conditioner for five to ten minutes (to "cold-soak" the air distribution chamber), then follow through with the heater check-out.
