Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas M. A. Hayat, 2005-01-31 Immunohistochemistry is the use of specific antibodies to stain particular molecular species in situ This technique has allowed the identification of many more cell types than could be visualized by classical histology particularly in the immune system and among the scattered hormone secreting cells of the endocrine system and has the potential to improve diagnosis prognosis and therapeutic options of cancer Handbook of Immunohistochemistry and in Situ Hybridization of Human Carcinomas discusses all aspects of immunohistochemistry and in situ hybridization technologies and the important role they play in reaching a cancer diagnosis It provides step by step instructions on the methods of additional molecular technologies such as DNA microarrays and microdissection along with the benefits and limitations of each method The topics of region specific gene expression its role in cancer development and the techniques that assist in the understanding of the molecular basis of disease are relevant and necessary in science today This book is the second volume of three planned individually sold volumes on this topic Like Volume 1 this book fully explains the principles and applications of modern techniques used in the field of molecular genetics It will be of particular interest to pathologists and molecular pathologists conducting both academic and or clinical research The only book available that translates molecular genetics into cancer diagnosis The results of each Immunohistochemical and in situ hybridization method are presented in the form of color illustrations Methods discussed were either developed or refined by expert contributors in their own laboratories

Molecular Diagnostic PCR Handbook Gerrit J. Viljoen, Louis H. Nel, John R. Crowther, 2005-12-06 PREFACE The Joint FAO IAEA Division of Nuclear Techniques in Food and Agriculture is involved in agricultural research and development and assists Member States of FAO and IAEA in improving strategies to ensure food security through the use of nuclear techniques and related biotechnologies where such techniques have a valuable and often unique role In particular molecular diagnostic methods have rapidly evolved in the past twenty years since the advent of the Polymerase Chain Reaction PCR They are used in a wide range of agricultural areas such as improving soil and water management producing better crop varieties diagnosing plant and animal diseases controlling insect pests and improving

food quality and safety The uses of nucleic acid directed methods have increased significantly in the past five years and have made important contributions to disease control country programmes for improving national and international trade These developments include the more routine use of PCR as a diagnostic tool in veterinary diagnostic laboratories However there are many problems associated with the transfer and particularly the application of this technology These include lack of consideration of the establishment of quality assured procedures the required set up of the laboratory and the proper training of staff This can lead to a situation where results are not assured This book gives a comprehensive account of the practical aspects of PCR and strong consideration is given to ensure its optimal use in a laboratory environment This includes the setting up of a PCR laboratory Good Laboratory Practice and standardised of PCR protocols **Volcanic Ash and Aviation Safety** Thomas J.
