Electromagnetic radiation is a kind of **(1)** \_\_\_\_\_ that behaves like a(n) **(2)** \_\_\_\_\_ as it travels through space. **(3)** \_\_\_\_\_ is one type of electromagnetic radiation. Other examples include X rays, radio waves, and microwaves.

All waves can be characterized by their wavelength, amplitude, frequency, and **(4)** \_\_\_\_\_. The shortest distance between equivalent points on a continuous wave is called a(n) **(5)** \_\_\_\_\_. The height of a wave from the origin to a crest or from the origin to a trough is the **(6)** \_\_\_\_\_. **(7)** \_\_\_\_\_ is the number of waves that pass a given point in one second. The SI unit for frequency is the **(8)** \_\_\_\_\_, which is equivalent to one wave per second.

Use the figure to answer the following questions.

9. Which letter(s) represent one wavelength? \_\_\_\_\_
10. Which letter(s) represent the amplitude? \_\_\_\_\_
11. If twice the length of A passes a stationary point every second, what is the frequency of the wave?

Basic Chemometric Techniques in Atomic Spectroscopy Jose Andrade-Garda, 2015-11-09 The first edition of this book was a first book for atomic spectroscopists to present the basic principles of experimental designs optimization and multivariate regression Multivariate regression is a valuable statistical method for handling complex problems such as spectral and chemical interferences which arise during atomic spectrometry However the technique is underused as most spectroscopists do not have time to study the often complex literature on the subject This practical introduction uses conceptual explanations and worked examples to give readers a clear understanding of the technique Mathematics is kept to a minimum but when required is kept at a basic level Practical considerations interpretations and troubleshooting are emphasized and literature surveys are included to guide the reader to further work The same dataset is used for all chapters dealing with calibration to demonstrate the differences between the different methodologies Readers will learn how to handle spectral and chemical interferences in atomic spectrometry in a new more efficient and cost effective way
