 James Fargo Balliett, 2016-07-01 Always awe inspiring mountainous areas contain hundreds of millions of years of history
 stretching back to the earliest continental landforms This book shows how mountains are characterized by their distinctive
 geological ecological and biological conditions Often they are so large that they create their own weather patterns They also
 store nearly one third of the world's freshwater in the form of ice and snow on their slopes Despite their daunting size and
 often formidable climates mountains are affected by growing local populations as well as distant influences such as air
 pollution and global climate change Three detailed case studies are presented The first shows how global warming in East
 Africa is harming Mount Kenya's regional population which relies on mountain runoff to irrigate farms for subsistence crops
 The second examines the fragile ecology of the South Island Mountain in New Zealand's Southern Alps and how development
 threatens the region's endemic plant and animal species The third discusses the impact of mountain use over time in New
 Hampshire's White Mountains where management efforts have been used to limit the growing footprint of millions of annual
 visitors and alpine trekkers **Science and Earth History** Arthur N. Strahler, 1999-11-01 In this comprehensive treatment
 of the ongoing conflict between creationists and evolutionary scientists well known geomorphologist Arthur Strahler
 carefully examines creationists' claims of scientific evidence for the six day divine creation of the universe followed by the
 catastrophic flood of Noah as claimed in Genesis The creationists' arguments are examined and evaluated against the findings
 of mainstream science in the fields of cosmology astronomy geophysics geology paleontology and evolutionary biology
 Updated with a new preface and responses to recent attacks on evolutionary theory Science and Earth History can serve as
 both a popular overview of earth history and as a scholarly anecdote to the fictions of creationism once again finding their
 way into classrooms and universities Strahler illuminates the controversy by reviewing the philosophy methodology and
 sociology of empirical science as contrasted with the belief systems of religion and pseudoscience The author also includes
 lucid criteria for distinguishing science from pseudoscience and reviews the great discoveries and developments in science
 that point to the evolution of life over the earth's three billion year history **The British National Bibliography** Arthur
