Olling,Byoung K. Choi,Robert B. Jerard,2013-03-20 On November 9 11 1998 85 participants representing 17 countries gathered in Auburn Hills Michigan at the Chrysler Tech

Center to attend a workshop SSM 98 or Sculptured Surface Machining 98 organized by IFIP Working Group 5.3 This was the first major workshop on sculptured surface machining since the CAM I sponsored conference Machining Impossible Surfaces held in 1981. The purpose of the SSM 98 workshop entitled Machining Impossible Shapes was to promote a cross fertilization of ideas among three communities: industrial users, CAM software developers and academic researchers. There were 17 participants who were industrial users, 15 represented CAM software developers, 4 were from the machine tool industry with the remainder being academic researchers. The format of the meeting included 40 presentations in 9 sessions, 4 keynote speeches and a sufficient amount of time for informal discussion amongst the participants. One of the most valuable aspects of the workshop was the opportunity for participants to meet informally and to discuss their mutual interests. This led to two participant organized sessions on five axis machining and on machine tool controllers.

Zhang-Gradient Control Yunong Zhang, Binbin Qiu, Xiaodong Li, 2020-11-24. This book introduces readers to using the simple but effective Zhang gradient ZG method to solve tracking control problems concerning various nonlinear systems while also highlighting the applications of the ZG method to tracking control for practical systems e.g. an inverted pendulum on a cart-IPC system and a two wheeled mobile robot showing its potential applications. In addition to detailed theoretical analyses of ZG controllers, the book presents a wealth of computer simulations to demonstrate the feasibility and efficacy of the controllers discussed as well as the method itself. More importantly, the superiority of ZG controllers in overcoming the division by zero (DBZ) problem is also illustrated. Given its scope and format, the book is well suited for undergraduate and graduate students as well as academic and industrial researchers in the fields of neural dynamics, neural networks, nonlinear control, computer mathematics, time-varying problem solving, modeling and simulation, analog hardware and robotics.

Architecture and Design for Industry 4.0 Maurizio Barberio, Micaela Colella, Angelo Figliola, Alessandra Battisti, 2023-10-06. This book collects contributions of forefront research and practices related to the use of the enabling technologies of Industry 4.0 in the architecture and design fields and their impact on the UN's Sustainable Development goals. The book is structured into three sections: research practice and technologies with the goal of creating a new framework useful for widespread awareness necessary to initiate technology transfer processes for the benefit of the public sector, universities, research centers and innovative companies and a new professional figure capable of controlling the entire process is essential. Thus, the book chapters arouse a series of relevant

topics such as computational and parametric design performance based architecture data driven design strategies parametric environmental design and analysis computational and parametric structural design and analysis AI and machine learning BIM and interoperability VR and AR digital and robotic fabrication additive manufacturing and 3D printing R D and entrepreneurship circular architecture and didactics In the post digital era where the essence of design lies in the control and information of the process that holistically involves all the aspects mentioned above rather than in formal research it is necessary to understand technologies and analyze the advantages that they can bring in terms of environmental sustainability and product innovation
