Microbiology Daniel V. Lim, 2003 **A Research Review of Interventions to Increase the Persistence and Resilience of Coral Reefs** National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Life Sciences, Ocean Studies Board, Committee on Interventions to Increase the Resilience of Coral Reefs, 2019-05-05 Coral reef declines have been recorded for all major tropical ocean basins since the 1980s averaging approximately 30 50% reductions in reef cover globally These losses are a result of numerous problems including habitat destruction pollution overfishing disease and climate change Greenhouse gas emissions and the associated increases in ocean temperature and carbon dioxide CO₂ concentrations have been implicated in increased reports of coral bleaching disease outbreaks and ocean acidification OA For the hundreds of millions of people who depend on reefs for food or livelihoods the thousands of communities that depend on reefs for wave protection the people whose cultural practices are tied to reef resources and the many economies that depend on reefs for fisheries or tourism the health and maintenance of this major global ecosystem is crucial A growing body of research on coral physiology ecology molecular biology and

responses to stress has revealed potential tools to increase coral resilience Some of this knowledge is poised to provide practical interventions in the short term whereas other discoveries are poised to facilitate research that may later open the doors to additional interventions A Research Review of Interventions to Increase the Persistence and Resilience of Coral Reefs reviews the state of science on genetic ecological and environmental interventions meant to enhance the persistence and resilience of coral reefs The complex nature of corals and their associated microbiome lends itself to a wide range of possible approaches This first report provides a summary of currently available information on the range of interventions present in the scientific literature and provides a basis for the forthcoming final report

Cycles of Contingency Susan Oyama, Russell D. Gray, Paul E. Griffiths, 2003-01-24 The nature nurture debate is not dead Dichotomous views of development still underlie many fundamental debates in the biological and social sciences Developmental systems theory DST offers a new conceptual framework with which to resolve such debates DST views ontogeny as contingent cycles of interaction among a varied set of developmental resources no one of which controls the process These factors include DNA cellular and organismic structure and social and ecological interactions DST has excited interest from a wide range of researchers from molecular biologists to anthropologists because of its ability to integrate evolutionary theory and other disciplines without falling into traditional oppositions The book provides historical background to DST recent theoretical findings on the mechanisms of heredity applications of the DST framework to behavioral development implications of DST for the philosophy of biology and critical reactions to DST

Academic Literacy and the Nature of Expertise Cheryl Geisler, 2013-11-05 The first full length account integrating both the cognitive and sociological aspects of reading and writing in the academy this unique volume covers educational research on reading and writing rhetorical research on writing in the disciplines cognitive research on expertise in ill defined problems and sociological and historical research on the professions The author produced this volume as a result of a research program aimed at understanding the relationship between two concepts literacy and expertise which traditionally have been treated as quite separate phenomena A burgeoning literature on reading and writing in the academy

has begun to indicate fairly consistent patterns in how students acquire literacy practices This literature shows furthermore that what students do is quite distinct from what experts do While many have used these results as a starting point for teaching students how to be expert the author has chosen instead to ask about the interrelationship between expert and novice practice seeing them both as two sides of the same project a cultural historical professionalization project aimed at establishing and preserving the professional privilege The consequences of this professionalization project are examined using the discipline of academic philosophy as the site for the author's investigations Methodologically unique these investigations combine rhetorical analysis protocol analysis and the analysis of classroom discourse The result is a complex portrait of how the participants in this humanistic discipline use their academic literacy practices to construct and reconstruct a great divide between expert and lay knowledge This monograph thus extends our current understanding of the rhetoric of the professions and examines its implications for education
