

The Respiratory System

Objectives

Students will:

- Identify the parts of the respiratory system
- learn how the parts work together to move air in and out of the body
- understand how the epiglottis keeps food from entering the windpipe.

Materials

- thermometer
- beaker
- empty paper towel roll

Building Understanding

1. Ask students to brainstorm everything they know about breathing and list their responses on the board. (Answers may include: we breathe in oxygen; we breathe to stay alive; we breathe through our nose and/or mouth; we breathe faster when we exercise; air goes into our lungs, etc.)

Explain that during breathing we take air into our lungs so oxygen can be absorbed into our blood and waste carbon dioxide can be removed from our body.

Ask students to take a deep breath, then cup their hand lightly over their nose and mouth to feel the air they breathe out.

Ask students if the breathed-out air feels warm or cool and why they think it feels so warm. If you have a thermometer and a beaker, take the air temperature. Then place the thermometer in the beaker and ask a student to exhale into it. Ask students how the temperature of the exhaled air compares to room temperature.

2. Ask students to count the number of times they breathe in as you time one minute. Students can multiply this number by 60 and the result by 24 to discover how many times they breathe during one day. Then ask students to run in place for two minutes and recount as you time one minute. Ask
