Fighting in the Dark Vincent P. O'Hara, Trent Hone, 2025-01-16 Fighting in the Dark is a new book about naval combat at night the title also however signifies the overarching theme of the book of moving from dark to light in short the process of mastering technological change during war The authors start with the proposition that it is hard to hit an invisible target particularly one in motion In the nineteenth century when ships relied upon visual signaling and vessels beyond hailing range were deaf and mute in the dark night battles at sea were rare and largely accidental Three inventions changed this the torpedo the searchlight and the radio These inventions at the end of the nineteenth and start of the twentieth centuries transformed naval warfare by making combat in the dark feasible and in some cases desirable The process by which navies used the dark and adapted it into a medium for effective combat was long and difficult more so for some than

others This book is about that process and about how Russian British German Italian Japanese and US navies confronted the specific new challenges and adapted to unfamiliar situations and emerging technologies Fighting in the Dark consists of chapters written by a group of highly respected naval historians and the book s approach illuminates how different navies and cultures approached common problems The fierce night time battles that are described serve as a metaphor for the larger issues and the reader is led along a fascinating journey of naval warfare from the Russo Japanese War through WWI to the Second World War and from the Pacific to the English Channel
