Abstract The purpose of the study was to examine the effectiveness of the Chautauqua Professional Development Program in terms of the mastery of basic science concepts, understanding major science processes, use of creativity skills, improvement of student attitudes toward science, and the ability to apply science concepts and processes in new situations. Participants included twelve teachers who agreed to participate in an experimental study where Science, Technology, and Society (STS) strategies were utilized with two class sections where in one class the teacher determined the course structure and the form of instruction that was typically used. Conversely, the experimental class was almost exclusively student-centered. A total of twenty-four sections of students were in STS sections (365 students) and a similar number in control sections (359 students). The data collected were analyzed using quantitative methods. The results were tabulated and contrasted for students enrolled in the two sections for all the teachers. The results indicate that students in the student-centered STS sections achieved significantly better than students in the teacher-directed STS sections in terms of understanding and use of process skills, use of creativity skills, development of more positive attitudes; and the ability to apply science concepts in new contexts. However, there were no significant differences noted with respect to mastery of basic science concepts. Apparently student-centered STS approaches result in

students with conceptual understandings but it is no better than the situation where teachers guide and direct inquiry STS approaches which focus much more exclusively on specific concepts and their definitions.

Introduction

Reform documents such as the National Science Education Standards (NSES) (1996) are designed to restructure and reform science education. Developing scientific literacy is often defined as the knowledge and understanding of scientific concepts useful for daily living (National Research Council (NRC) 1996). Scientific literacy enables students to not only use scientific principles and processes in making personal decisions but also to participate in discussions of scientific issues which affect society. Scientific literacy includes using many skills that people need in everyday life, such as being able to solve problems creatively, thinking critically, working cooperatively in teams, and using technology effectively.

The reform movement characterizing Science, Technology, and Society (STS) contributes to the goal of scientific literacy (National Science Teachers Association 2007; Mihajicorgu and Ali 2003; Lee 2009). STS provides direction for achieving scientific and technological literacy for all. The emphasis is on responsible decision-making in the real world of the student where science and technology are both components. The National Science Teachers Association defines the STS approach as the teaching and learning of science and technology in the context of human
