Drug Discovery and Design Using Natural Products Jorddy Neves Cruz, 2023-08-28 Historically natural products have great relevance for the development of new drugs Natural molecules in addition to directly providing new compounds with different therapeutic functions have provided scaffolds and a great diversity of structures that serve as inspiration for the design and discovery of new drugs The great structural complexity and the significant number of natural compounds that can be obtained and their advantages also present some historical problems that need to be overcome Issues such as difficulty in isolation difficulty in synthesizing compounds found in nature in the laboratory screening to evaluate the biological properties of these compounds and structural optimization to enhance the pharmacological properties of biomolecules are some of the main difficulties encountered in research with natural products and in the design discovery of new medicines Therefore this book addresses the great scientific advances that provide practical solutions to using natural products to develop new drugs We address topics related to the genesis of research projects that use natural products to design new drugs We address the discovery of new species initial processes for identification and extraction of compounds isolation and identification of these structures techniques and advances in vitro and in vivo methods that support the discovery of new natural drugs synthesis of new compounds from natural molecules in silico optimization processes of potentially promising compounds

Synthesis of Marine Natural Products 1 K.F. Albizati,V.A. Martin,M.R. Agharahimi,D.A. Stolze,2012-12-06 Volumes five and six of Bioorganic Marine Chemistry differ from their predecessors in two respects they deal exclusively with laboratory synthesis of marine natural products and they represent the effort of a single author and his associates The rationale for these departures is readily perceived For several decades organic synthesis has without doubt been the most spectacular branch of organic chemistry While the late R B Woodward's dictum organic compounds can undergo only four basic reactions they can gain electrons they can lose electrons they can be transformed with acid or with base is still true the wealth and variety of available reagents which will accomplish chemical transformations has reached staggering proportions Little wonder then that synthetic methodology has achieved a high degree of predictability and total synthesis of natural products has been successfully directed toward ever more challenging targets As for the second point that of single authorship multiple authorship would invariably have led to gaps and overlaps thus making it difficult to assemble and assess recent research in a systematic and comprehensive fashion

Natural Products for Antibacterial Drug Development: Recent Advancement of Computational Approach Tripti Sharma,Chita Ranjan Sahoo,Debdutta Bhattacharya,Sanghamitra Pati,2024-12-12 The book focuses on the rampant use of higher dose antibiotics in human routine consumption and how it leads to bacterial resistance to multiple drugs Book chapters focus on the result of their overuses and concomitant misuses and how antibiotics have become synonymous with the unending hellish experience that is antimicrobial resistance by pathogenic microbes It also talks about the challenges associated with the treatment of bacterial infections and challenges to mankind due to the development of high rates of antibiotic resistance This book also provides information about developments of antibacterial drugs from natural sources In addition it also covers different computational approaches used for antibacterial drug development from natural sources in recent times Finally the book also elucidates a detailed outline of bacterial resistance status current treatment methods natural products as an opportunity for the development of potent druggable candidates and methods of antibacterial drug development This book serves as a great resource for students researchers and academicians in the field of pharmacology
