REACTION RATES AND EQUILIBRIUM

SECTION 18.1 RATES OF REACTION (pages 541–543)

This section explains what is meant by the rate of a chemical reaction. It also uses collision theory to derive from the rate of a chemical reaction an equation for the reaction conditions.

► Collision Theory (pages 541–543)

1. How can rates of chemical change expressed?

Rates of chemical change are usually expressed in dimensions of moles/liters/second per unit time.

2. Look at Figure 18.1 on page 541. In a typical reaction, as time passes, the amount of reactants decreases and the amount of products increases.

3. What does collision theory say about the reaction of atoms, ions, or molecules resulting in ionic products when they collide?

Collision theory states that the molecules must have enough kinetic energy when they collide to form products.

4. Look at the figure below. One shows a collision that results in the formation of product. Label it effective collision. Label the other collision ineffective collision.

5. In the following sentence, true or false? Particles lacking the necessary kinetic energy to react become apart unchanged when they collide. TRUE

6. Look at Figure 18.3 on page 543. Which arrangement of atoms models the least amount of energy?

- a. reactants
b. activated complex
c. products

Chemistry of Ozone in Water and Wastewater Treatment Clemens von Sonntag, Urs von Gunten, 2012-08-31 Even though ozone has been applied for a long time for disinfection and oxidation in water treatment there is lack of critical information related to transformation of organic compounds This has become more important in recent years because there is considerable concern about the formation of potentially harmful degradation products as well as oxidation products from the reaction with the matrix components In recent years a wealth of information on the products that are formed has accumulated and substantial progress in understanding mechanistic details of ozone reactions in aqueous solution has been made Based on the latter this may allow us to predict the products of as yet not studied systems and assist in evaluating toxic potentials in case certain classes are known to show such effects Keeping this in mind Chemistry of Ozone in Water and Wastewater Treatment From Basic Principles to Applications discusses mechanistic details of ozone reactions as much as they are known to date and applies them to the large body of studies on micropollutant degradation such as pharmaceuticals and endocrine disruptors that is already available Extensively quoting the literature and updating the available compilation of ozone rate constants gives the reader a text at hand on which his research can be based Moreover those that are responsible for planning or operation of ozonation steps in drinking water and wastewater treatment plants will find salient information in a compact form that otherwise is quite dispersed A critical compilation of rate constants for the various classes of compounds is given in each chapter including all the recent publications This is a very useful source of information for researchers and practitioners who need kinetic information on emerging contaminants Furthermore each chapter contains a large selection of examples of reaction mechanisms for the transformation of micropollutants such as pharmaceuticals pesticides fuel additives solvents taste and odor compounds cyanotoxins Authors Prof Dr Clemens von Sonntag Max Planck Institut für Bioanorganische Chemie Mülheim an der Ruhr and Instrumentelle Analytische Chemie Universität Duisburg Essen Essen Germany and Prof Dr Urs von Gunten Eawag Swiss Federal Institute of Aquatic Science and Technology Dübendorf and Ecole Polytechnique Fédérale de Lausanne Lausanne Switzerland **EJB**

Reviews 1991 P. Christen, E. Hofmann, 2013-11-21 In the mid 1980s the European Journal of Biochemistry set out to publish review articles The enterprise proved successful resulting in high level reviews written by well known scientists appearing in the Journal The reviews represent emerging and rapidly growing fields of research in fundamental as well as applied areas of biochemistry such as medicine biotechnology agriculture and nutrition Novel methodological and technological approaches which stimulate biochemical research are also included The authors of the reviews are explicitly asked to be critical selective evaluative and interdisciplinarily oriented The reviews should encourage young scientists toward independent and creative thinking and inform active investigators about the state of the art in a given field **Organic Chemistry, 4e Student**
