**Invasive Species in a Globalized World** Reuben P. Keller, Marc W. Cadotte, Glenn Sandiford, 2015

Global trade and the spread of human populations have increasingly moved thousands of native animal and plant species across the natural barriers that have kept them ecologically separated for millions of years. Because some of them thrive in their new regions and harm the environment, the economy, and human health, the prevention and management of such invasive species has become a major local, national, and international policy initiative. Yet even though ecologists have been studying the negative and sometimes positive environmental impacts of invasive species and trying to curb their proliferation, and even though their work has in some cases stimulated public conversation, and policy, politicians have generally ignored their recommendations. As a result, ecologists have achieved limited success in slowing the spread of invasives. They've been realizing that in order to fully characterize the impacts of these species, they need to engage with other relevant disciplines across the social and legal sciences, as well as the humanities. Drawing together a wide variety of ecologists, historians, economists, legal scholars, policymakers, and communication scholars, *Invasive Species in a Globalized World* aims to facilitate a dialogue among these various disciplines in order to fully understand invasives and stop their spread. Addressing the numerous challenges associated with reducing invasive impacts, the contributors provide direct policy recommendations, strategies for communicating the risks of invasive species, and insight into how public discourse drives our response to these risks.
