El-Hi Textbooks & Serials in Print, 2005, 2005 **ENC Focus**, 2000 *Mathematics & Science in the Real World*, 2000 Integer Programming Hamdy A. Taha, 2014-05-10 Integer Programming Theory Applications and Computations provides information pertinent to the theory applications and computations of integer programming This book presents the computational advantages of the various techniques of integer programming Organized into eight chapters this book begins with an overview of the general categorization of integer applications and explains the three fundamental techniques of integer programming This text then explores the concept of implicit enumeration which is general in a sense that it is applicable to any well defined binary program Other chapters consider the branch and bound methods the cutting plane method and its closely related asymptotic problem This book discusses as well several specialized algorithms for certain well known integer models and provides an alternative approach to the solution of the integer problem The final chapter deals with a number of observations about the formulations and executions of integer programming models This book is a valuable resource for industrial engineers and research workers

Artificial Intelligent Methods for Handling Spatial Data Jörg Verstraete, 2018-08-31 This book provides readers with an insight into the development of a novel method for regridding gridded spatial data an operation required to perform the map overlay operation and apply map algebra when processing spatial data It introduces the necessary concepts from spatial data processing and fuzzy rulebase systems and describes the issues experienced when using current regridding algorithms The main focus of the book is on describing the different modifications needed to make the problem compatible with fuzzy rulebases It offers a number of examples of out of the box thinking to handle aspects such as rulebase construction defuzzification spatial data comparison etc At first the emphasis is put on the newly developed method and additional datasets containing information on the underlying spatial distribution of the data are identified After this an artificial intelligent system in the form of a fuzzy inference system is constructed using this knowledge and then applied on the input data to perform the regridding The book offers an example of how an apparently simple problem can pose many different challenges even when trying to solve it with existing soft computing technologies The workflow and solutions to solve these challenges are universal and may therefore be broadly applied into other contexts
