Books and Pamphlets Including Serials and Contributions to Periodicals July December *Computer Algebra in Scientific Computing* Vladimir P. Gerdt, Wolfram Koepf, Werner M. Seiler, Evgenii V. Vorozhtsov, 2017-09-07 This book constitutes the proceedings of the 19th International Workshop on Computer Algebra in Scientific Computing CASC 2017 held in Beijing China in September 2017 The 28 full papers presented in this volume were carefully reviewed and selected from 33 submissions They deal with cutting edge research in all major disciplines of Computer Algebra **The Publishers' Trade List Annual**, 1974 **The Muslim Contribution to Mathematics** Ali Abdullah Al-Daffa', 2020-09-10 This book first published in 1977 discusses the Muslim contribution to mathematics during the golden age of Muslim learning from the seventh to the thirteenth century It was during this period that Muslim culture exerted powerful economic political and religious influence over a large part of the civilised world The work of the Muslim scholars was by no means limited to religion business and government They researched and extended the theoretical and applied science of the Greeks and Romans of an earlier era in ways that preserved and strengthened man's knowledge in these important fields Although the main object of this book is to trace the history of the Muslim contribution to mathematics during the European Dark Ages some effort is made to explain the progress of mathematical thought and its effects upon present day culture Certain Muslim mathematicians are mentioned because of the important nature of their ideas in the evolution of mathematical thinking during this earlier era Muslim mathematicians invented the present arithmetical decimal system and the fundamental operations connected with it addition subtraction multiplication division raising to a power and extracting the square root and the cubic root They also introduced the zero symbol to Western culture which simplified considerably the entire arithmetical system and its fundamental operations it is no exaggeration if it is said that this specific invention marks the turning point in the development of mathematics into a science *Solution of Superlarge Problems in Computational Mechanics* James H. Kane, 2012-12-06 There is a need to solve problems in solid and fluid mechanics that currently exceed the resources of current and foreseeable supercomputers The issue revolves around the number of degrees of freedom of simultaneous equations that one needs to accurately describe the problem and the computer storage and speed limitations which prohibit such solutions The goals of this symposium were to explore some of the latest work being done in both industry and academia to solve such extremely large problems and to provide a forum for the discussion and prognostication of necessary future directions of both man and machine As evidenced in this proceedings we believe these goals were met Contained in this volume are discussions of iterative solvers and their application to a variety of problems e.g. structures fluid dynamics and structural acoustics iterative dynamic substructuring and its use in structural acoustics the use of the boundary element method both alone and in conjunction with the finite element method the application of finite difference methods to problems of incompressible turbulent flow and algorithms amenable to concurrent computations and their applications Furthermore discussions of existing computational shortcomings from the big picture point of view are

presented that include recommendations for future work Fundamentals of Computation Theory Zoltan Esik,1993-08-04 This volume contains the proceedings of the Ninth Conference on Fundamentals of Computation Theory FCT 93 held in Szeged Hungary in August 1993 The conference was devoted to a broad range of topics including Semantics and logical concepts in the theory of computing and formal specification Automata and formal languages Computational geometry algorithmic aspects of algebra and algebraic geometry cryptography Complexity sequential parallel distributed computing structure lower bounds complexity of analytical problems general concepts Algorithms efficient probabilistic parallel sequential distributed Counting and combinatorics in connection with mathematical computer science The volume contains the texts of 8 invited lectures and 32 short communications selected by the international program committee from a large number of submitted papers *Imprecision and Uncertainty in Information Representation and Processing* Plamen Angelov, Sotir Sotirov, 2015-12-22 The book offers a comprehensive and timely overview of advanced mathematical tools for both uncertainty analysis and modeling of parallel processes with a special emphasis on intuitionistic fuzzy sets and generalized nets The different chapters written by active researchers in their respective areas are structured to provide a coherent picture of this interdisciplinary yet still evolving field of science They describe key tools and give practical insights into and research perspectives on the use of Atanassov's intuitionistic fuzzy sets and logic and generalized nets for describing and dealing with uncertainty in different areas of science technology and business in a single to date unique book Here readers find theoretical chapters dealing with intuitionistic fuzzy operators membership functions and algorithms among other topics as well as application oriented chapters reporting on the implementation of methods and relevant case studies in management science the IT industry medicine and or education With this book the editors wish to pay homage to Professor Krassimir Todorov Atanassov for his pioneering work on both generalized nets and intuitionistic fuzzy set
