Broek, 2012-12-06 This book is about the use of fracture mechanics for the solution of practical problems academic rigor is not at issue and dealt with only in as far as it improves insight and understanding it often concerns secondary errors in engineering Knowledge of ignorance of such basic input as loads and stresses in practical cases may cause errors far overshadowing those introduced by shortcomings of fracture mechanics and necessary approximations this is amply demonstrated in the text I have presented more than three dozen 40 hour courses on fracture mechanics and damage tolerance analysis so that I have probably more experience in teaching the subject than anyone else I

learned more than the students and became cognizant of difficulties and of the real concerns in applications In particular I found how a subject should be explained to appeal to the practicing engineer to demonstrate that his practical problem can indeed be solved with engineering methods This experience is reflected in the presentations in this book Sufficient background is provided for an understanding of the issues but pragmatism prevails Mathematics cannot be avoided but they are presented in a way that appeals to insight and intuition in lieu of formal derivations which would show but the mathematical skill of the writer Introduction to Unmanned Aircraft Systems, Second Edition Douglas M.

Middleton, Jinfa Cai, Stephen

Hwang, 2015-05-05 In recent years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational researchers have recently begun to use large scale studies to understand what really works from developing interventions to validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an intervention Moreover modeling student learning developmentally taking into account cohort factors issues of socioeconomics local political context and the presence or absence of interventions requires the use of large data sets wherein these variables can be sampled adequately and inferences made Inroads in quantitative methods have been made in the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics education community In fact currently there is no volume devoted to discussion of issues related to large scale studies and to report findings from them This volume is unique as it directly discusses methodological issue in large scale studies and reports empirical data from large scale studies

Applied Mechanics Reviews ,1972 Learning Through Teaching Mathematics Roza Leikin,Rina Zazkis,2010-04-10

The idea of teachers Learning through Teaching LTT when presented to a na ve bystander appears as an oxymoron Are we not supposed to learn before we teach After all under the usual circumstances learning is the task for those who are being taught not of those who teach However this book is about the learning of teachers not the learning of students It is an ancient wisdom that the best way to truly learn something is to teach it to others Nevertheless once a teacher has taught a particular topic or concept and consequently truly learned it what is left for this teacher to learn As evident in this book the experience of teaching presents teachers with an exciting opp tunity for learning throughout their entire career This means acquiring a better understanding of what is being taught and moreover learning a variety of new things What these new things may be and how they are learned is addressed in the collection of chapters in this volume LTT is acknowledged by multiple researchers and mathematics educators In the rst chapter Leikin and Zazkis review literature that recognizes this phenomenon and stress that only a small number of studies attend systematically to LTT p cesses The authors in this volume purposefully analyze the teaching of mathematics as a source for teachers own learning
