The reimagined party Katharine Dommett, 2020-06-18 Political parties are an established feature of contemporary democratic politics For decades parties have organised government competed in elections and influenced the way society is run Yet despite their importance the status of political parties in society is presently unclear On the one hand lambasted as duplicitous self interested dogmatic organisations that are in decline on the other they have been proclaimed as resurgent bodies that are attracting new levels of membership and support The reimagined party offers unprecedented insight into public views of parties in Britain Exploring public perceptions and desires Katharine Dommett finds that far from rejecting parties there is ongoing support for party democracy The book presents evidence of a desire for change in party ethos introducing the idea of the reimagined party to explore perceptions of party representation participation governance and conduct Using a mixed method approach and presenting hitherto unseen data the book casts new light on citizens' desires for parties today

Climate Adaptation Policy and Evidence Peter Tangney, 2017-07-28 Evidence based policymaking is often promoted within liberal democracies as the best means for government to balance political values with technical considerations Under the evidence based mandate both experts and non experts often assume that policy problems are sufficiently tractable and that experts can provide impartial and usable advice to government so that problems like climate

change adaptation can be effectively addressed at least where there is political will to do so This book compares the politics and science informing climate adaptation policy in Australia and the UK to understand how realistic these expectations are in practice At a time when both academics and practitioners have repeatedly called for more and better science to anticipate climate change impacts and thereby to effectively adapt this book explains why a dearth of useful expert evidence about future climate is not the most pressing problem Even when it is sufficiently credible and relevant for decision making climate science is often ignored or politicised to ensure the evidence based mandate is coherent with prevailing political economic and epistemic ideals There are other types of policy knowledge too that are arguably much more important This comparative analysis reveals what the politics of climate change mean for both the development of useful evidence and for the practice of evidence based policymaking

Handbook of Policy Formulation Michael Howlett, Ishani Mukherjee, 2017-04-28 Policy formulation relies upon the interplay of knowledge based analysis of issues with power based considerations such as the political assessment of the costs and benefits of proposed actions and its effects on the partisan and electoral concerns of governments Policy scholars have long been interested in how governments successfully create deploy and utilise policy instruments but the literature on policy formulation has until now remained fragmented This comprehensive Handbook unites original scholarship on policy tools and design with contributions examining policy actors and the roles they play in the formulation process

A Field Philosopher's Guide to Fracking Adam Briggles, 2015-10-01 Winner of the Writers League of Texas Book Awards Finalist for the J Anthony Lukas Book Prize From the front lines of the fracking debate a field philosopher explores one of our most divisive technologies When philosophy professor Adam Briggles moved to Denton Texas he had never heard of fracking Only five years later he would successfully lead a citizens initiative to ban hydraulic fracturing in Denton the first Texas town to challenge the oil and gas industry On his journey to learn about fracking and its effects he leaped from the ivory tower into the fray In beautifully narrated chapters Briggles brings us to town hall debates and neighborhood meetings where citizens wrestle with issues few fully understand Is fracking safe How does it affect the local economy Why are bakeries prohibited in neighborhoods while gas wells are permitted next to playgrounds In his quest for answers Briggles meets people like Cathy McMullen Her neighbors cows asphyxiated after drinking fracking fluids and her orchard was razed to make way for a pipeline Cathy did not consent to drilling but those who profited lived far out of harm s way Briggles s first instinct was to think about fracking deeply Drawing on philosophers from Socrates to Kant but also on conversations with engineers legislators and industry representatives he develops a simple theory to evaluate fracking we should give those at risk to harm a stake in the decisions we make and we should monitor for and correct any problems that arise Finding this regulatory process short circuited with government and industry alike turning a blind eye to symptoms like earthquakes and nosebleeds Briggles decides to take action Though our field philosopher is initially out of his element joining fierce activists like Texas Sharon once called the worst enemy of the oil and gas industry his story culminates in an underdog

victory for Denton now nationally recognized as a beacon for citizens rights at the epicenter of the fracking revolution
