

Guided Reading Qs (Do these before the Mastering Assignment.)

Tip: Watch the BioFlix animation in the Study Area of Mastering in this chapter. Then, put it on mute and see if you can narrate it!

- Describe the inputs and outputs of each three stages of aerobic respiration and compare each stage for amount of ATP made and location in the cell.
- Explain why oxygen is necessary and what happens when oxygen is not available.
- Explain why lactic acid or ethyl alcohol is sometimes an output of cellular respiration.

What are the names of the three stages of cellular respiration? Where does each stage take place?

	Name	Location in cell it occurs?	Quick description of what happens:
Stage 1:	glycolysis	cytosol	breaks down glucose into 2 molecules of a 3 carbon compound called pyruvate
Stage 2:	pyruvate oxidation citric acid cycle	mitochondria	complete the breakdown of glucose to CO_2
Stage 3:	oxidative phosphorylation	inner mitochondrial membrane	Final step of cell resp. Electron transport chain

A diagram of a cell showing the stages of cellular respiration and the resulting ATP production. The stages are represented by colored boxes: Glucose (blue), Glycolysis (orange), Pyruvate Acid Cycle (green), Citric Acid Cycle (red), and Oxidative Phosphorylation (purple). Arrows indicate the flow of the process. ATP production is shown as yellow starbursts: 2 ATP from Glycolysis, 2 ATP from the Citric Acid Cycle, and 28 ATP from Oxidative Phosphorylation. A label 'ETC & Chemiosmosis' points to the Oxidative Phosphorylation stage. The total ATP production is summarized as 'Total ~32-34'.

Glucose → Glycolysis → Pyruvate Acid Cycle → Citric Acid Cycle → Oxidative Phosphorylation (ETC & Chemiosmosis)

ATP production: 2 ATP (Glycolysis), 2 ATP (Citric Acid Cycle), 28 ATP (Oxidative Phosphorylation)

Total ~32-34

Textbook of Pulmonary and Critical Care Medicine Vols 1 and 2 SK Jindal, PS Shankar, Suhail Raoof, Dheeraj Gupta, 2011-01-31 This book published in two volumes Both volume divided in twenty three sections all sections and chapters are most important The Textbook of Pulmonary and Critical Care Medicine also offers a unique exposure to the problems in many parts of the world Tuberculosis the number one treatable condition has been extensively covered and special topics such as multi drug resistance directly observed therapy TB prevention nonpharmacologic approaches and extrapulmonary tuberculosis are particularly relevant Many countries are facing a growing burden of noncommunicable respiratory diseases They have become the second leading cause of death after injuries and

their impact on indirect costs such as loss of work and home productivity is enormous. These problems are addressed and measures of prevention such as smoking cessation are included. Other special challenges including topics such as indoor and outdoor air pollution, climate change, poisoning with pesticides, snakebite toxicity, pulmonary manifestations of tropical infections and industrial accidents such as the tragedy seen in Bhopal, Madhya Pradesh with methyl isocyanate have been well covered. However, as globalization flattens the playing field and countries leap to industrialization, cultural beliefs, natural resources, climate and geography have slowed the pace of development in many parts of the world. Poverty leads to malnutrition, homelessness, lack of education and poor access to health care. Overcrowded cities and rural underdevelopment are other challenges that impact health in the various parts of the world. Moreover, epidemics of HIV, drug abuse and smoking addiction take a greater toll on the population. Yes, the world is flat, but the terrain is filled with mountains and valleys and local problems demand local solutions. And these local problems need to be explored and presented with a scholarly perspective. The Textbook of Pulmonary and Critical Care Medicine has successfully incorporated these sociodemographic factors into the subject matter. The text is well written and the chapters are carefully referenced with subjects found in all traditional pulmonary and critical care textbooks, e.g., airway diseases, interstitial lung disease, pleural disease, pulmonary neoplasia, pulmonary infection, sleep and critical care. There are several nontraditional sections as well that are practical and especially helpful to the practicing physician. These include a section on the symptom approach to lung disease, an overview of the pharmacologic agents used to treat lung disease and a comprehensive review of methods in lung diagnosis, from the simple history and physical examination to the latest complex tools of interventional pulmonology. The textbook is especially unique because of the abundance of illustrations, flow charts and tables. There are many radiographic and pathologic reproductions that are especially helpful.

Biofeedback, Fourth Edition Mark S. Schwartz, Frank Andrasik, 2017-03-29. This comprehensive volume is widely regarded as the definitive practitioner resource and text resource in the field of biofeedback and applied psychophysiology. Leading experts cover basic concepts, assessment, instrumentation, clinical procedures and professional issues. Chapters describe how traditional and cutting edge methods are applied in treatment of a wide range of disorders including headaches, temporomandibular disorders, essential hypertension, pelvic floor disorders, attention deficit hyperactivity disorder, tinnitus and others. Applications for optimizing physical performance among artists and athletes are also reviewed. A wealth of information and empirical research is presented in an accessible style including helpful glossaries. New to This Edition: Incorporates significant technological developments and new research areas. Expanded focus on specialized applications such as electroencephalographic (EEG) biofeedback, neurofeedback and heart rate variability biofeedback. Chapters on surface electromyography, quantitative EEG and consumer products. Chapters on cognitive behavioral therapy and relaxation training. Chapters on additional clinical problems: anxiety disorders, asthma, work-related pain, traumatic brain injury, autism spectrum disorders and substance use disorders.
