

The Retrograde Motion of Mars

1) On what days does Mars start and end the retrograde motion? (First Observation)

Starts early March

Ends early October

2) On what days does Mars start and end the retrograde motion? (Second Observation)

December 23rd

March 18th

3) Explain why Mars appears to undergo retrograde motion.

Retrograde motion is an apparent change in direction, with Mars having a faster orbit than Earth. As Earth orbits the Sun, it eventually overtakes Mars, making Mars appear to move backward in the sky. This is similar to how a faster car passing a slower car on a highway makes the slower car appear to move backward relative to the observer.

4) Explain why we see Mars and not some of the Jovian planets for this retrograde.

The Jovian planets are much farther away, and their orbits take longer, so the retrogrades would be harder to readily see.

Retrograde Motion Of Mars Lab Answers
