**Analyzing the Analysts** United States. Congress. House. Committee on Financial Services. Subcommittee on Capital Markets, Insurance, and Government Sponsored Enterprises, 2001      **Financial Analysts' Forecasts and Stock Recommendations** Sundaresh Ramnath, Steve Rock, Philip B. Shane, 2008 Financial Analysts Forecasts and Stock Recommendations reviews research related to the role of financial analysts in the allocation of resources in capital markets. The authors provide an organized look at the literature with particular attention to important questions that remain open for further research. They focus research related to analysts' decision processes and the usefulness of their forecasts and stock recommendations. Some of the major surveys were published in the early 1990s and since then no less than 250 papers related to financial analysts have appeared in the nine major research journals that we used to launch our review of the literature. The research has evolved from descriptions of the statistical properties of analysts' forecasts to investigations of the incentives and decision processes that give rise to those properties. However, in spite of this broader focus, much of analysts' decision processes and the market's mechanism of drawing a useful consensus from the combination of individual analysts' decisions remain hidden in a black box. What do we know about the relevant valuation metrics and the mechanism by which analysts and investors translate forecasts into present equity values? What do we know about the heuristics relied upon by analysts and the market and the appropriateness of their use? Financial Analysts Forecasts and Stock Recommendations examines these and other questions and concludes by highlighting areas for future research.

The Future of Investment Management Ronald N. Kahn, 2018-11-12 Investment management is in flux arguably more than it has been in a long time Active management is under pressure with investors switching from active to index funds New smart beta products offer low cost exposures to many active ideas Exchange traded funds are proliferating Markets and regulations have changed significantly over the past 10 20 years and data and technology which are increasingly important for investment management are evolving even more rapidly In the midst of this change what can we say about the future of investment management What ideas will influence its evolution What types of products will flourish over the next 5 10 years I use a long perspective to address these questions and analyze the modern intellectual history of investment management the set of ideas that have influenced investment management up to now One central theme that emerges is that investment management is becoming increasingly systematic Our understanding of risk has evolved from a general aversion to losing money to a precisely defined statistic we can measure and forecast Our understanding of expected returns has evolved as the necessary data have become more available as our understanding of fundamental value has developed and as we have come to understand the connection between return and risk and the relevance of human behavior to both Data and technology have advanced in parallel to facilitate implementing better approaches With an understanding of the ideas underlying investment management today including several insights into active management I discuss the many trends currently roiling the field These trends applied to the current state of investment management suggest that investment management will evolve into three distinct branches indexing smart beta factor investing and pure alpha investing Each branch will offer two styles of products those that focus exclusively on returns and those that include goals beyond returns
