Past Papers G12:

Preserving the Past Julia Horne, Stephen Garton, 2017-03-20 The Dawkins reforms of the late 1980s and the creation of the Unified National System roused passions at many universities across the nation over fears for the academic enterprise and Australia's system of free public university education. With much at stake the Dawkins reforms became a hot topic of discussion across university campuses and even between Vice Chancellors and state education ministers. Vice Chancellors were threatened with motions of no confidence, staff argued furiously against change and students protested against fees yet mostly to no avail. The reforms were introduced and universities became subject to new ways of funding by the Commonwealth that changed the way higher education was organised in Australia. This volume tells the story of the Dawkins reforms at Australia's oldest university, the University of Sydney, and the unlikely alliance between the University's Vice Chancellor and the New South Wales government in the scramble for more students. Between 1988 and 1996 the University grew exponentially. At the same time it strove to preserve its honoured past despite profound change. Did this desire to preserve an older tradition compromise its effort to master the future?

Alexandrino da Silva, Luiza Antoun de Almeida, Ms. Diva Singh, 2021-05-07 In recent years we have observed an increase in low income countries LICs access to international capital markets especially after the Global Financial Crisis GFC This paper investigates what factors country specific macroeconomic fundamentals and or external variables have contributed to the surge in external bond issuance by these LICs which we refer to in our paper as frontier economies Using data on public and publicly guaranteed PPG external bond issuance outstanding PPG bond stock as well as sovereign spreads we employ panel data analysis to examine factors related to the increase in issuance by these economies as well as the reduction in their spreads over time Our empirical study shows that both country specific fundamentals such as public debt current account balance level of reserves quality of institutions and external variables such as US growth and the VIX index play a role in explaining the increased amount of issuance and the decline in spreads of frontier economies

sovereign bonds The impact of some of these variables on issuance appears to reflect a country's need to issue bonds for external financing the supply side of bond issuance while others appear to correlate more through their impact on investors' appetite for a country's debt the demand side In addition the impact of country specific variables can also be affected by external factors such as global risk appetite Our analysis of key factors that have contributed to increased market access for frontier economies over the past decade provides important information to gauge the prospects for their continued market access and for other LICs to join this group by tapping international markets for the first time
