Pathology Of Challenging Melanocytic Neoplasms Diagnosis And Management:

Pathology of Challenging Melanocytic Neoplasms Christopher R. Shea, Jon A. Reed, Victor G. Prieto, 2014-11-03

Melanocytic neoplasms are of capital importance for all surgical pathologists and dermatopathologists. These tumors span a huge range of morphologic expression and biologic behavior and are potentially of the highest medical significance and are often fraught with diagnostic pitfalls and high litigation risk. *Pathology of Challenging Melanocytic Neoplasms* offers a dynamic text where readers will encounter a broad spectrum of challenging melanocytic lesions, both benign and malignant, and will thereby acquire a solid working knowledge that they can immediately apply to daily diagnosis. The authors aim to clarify this often thorny field, keeping a steady focus on patient-related issues. The volume emphasizes the practical application of basic morphologic principles, immunohistochemistry, and molecular methods in order to secure a confident diagnosis. Abundant illustrations display the characteristic features of the most important disease entities. Rather than being yet another encyclopedic work of reference, this volume takes a fresh approach as it resembles a series of stimulating seminars employing exemplary case material to highlight, illustrate, and succinctly discuss the key points. To this end, the reader will be guided through a series of paired cases that pose a significant diagnostic challenge. By comprehensively comparing and contrasting two related entities, each such chapter will illuminate an intellectual pathway through which an important diagnostic puzzle can be solved. To broaden the differential diagnosis even further, additional illustrative cases are added to each discussion. Algorithms and tables summarize key points. Clinically relevant, up-to-date references will be provided to guide further study. Written by experts in the field, this novel text will be of great value to surgical pathologists in practice and dermatologists as well as residents and fellows training in these specialties.

Atlas of Diagnostically Challenging Melanocytic Neoplasms Caterina Longo, Giuseppe Argenziano, Aimilios Lallas, Elvira Moscarella, Simonetta Piana, 2017-12-18

This atlas provides a clear, concise overview of the most challenging circumstances faced by clinicians and pathologists when dealing with melanocytic neoplasms. The book is structured as a case series; for each case, the clinical and dermoscopic appearances are presented, accompanied by a brief but comprehensive description and compelling histopathologic images. When available, in vivo confocal microscopy images are also included to highlight additional diagnostic clues. Identification of key messages and selected references will further guide the reader in the diagnosis and management of the neoplasm under consideration. It is well known that melanocytic lesions can be difficult to interpret. Some lesions show an ambiguous combination of morphologic criteria, and in these cases, interpretation entails a high degree of subjectivity that results in low interobserver agreement, even among expert pathologists. This atlas demonstrates how the addition of clinical information, including that provided by dermoscopy, can assist in reaching a more confident diagnosis.
