Perkin Elmer Spectrum 1 Manual:

Spectral Atlas of Polycyclic Aromatic Compounds W. Karcher, 2013-06-29 Polycyclic Aromatic Compounds PAC are a broad class of compounds whose wide distribution in the environment results from incomplete combustion processes of fossil fuels in power generator industrial plant and domestic heating from car exhaust gas and from tobacco smoke Many PACs are biologically active and in particular many of the PACs with three or more fused rings are carcinogenic Currently there is concern of the occurrence of these pollutants at ppb ug kg⁻¹ level However the predicted 2 to 3% annual increase in the rate of their release into the environment could lead to ppm ug g levels in the next century The move towards stricter control of these pollutants brings with it the need for accurate monitoring of their environmental occurrence Reliable identification and quantification of these compounds in complex environmental samples depends greatly on the availability of reference values for their physicochemical and biochemical properties This second volume results from a close collaboration within the General Directorate for Science Research and Development of the Commission of the European Communities between the Joint Research Centre Ispra Establishment the Community Bureau of Reference and expert laboratories of the Member States

The Solar Constant and the Solar Spectrum Measured from a Research Aircraft Matthew Pothen Thekaekara, 1970 The solar constant and solar spectrum were measured from a research aircraft flying at 38 000 feet above the highly variable and absorbing constituents of the atmosphere A wide range of solar zenith angles was covered during six flights for over 14 hours Eleven instruments five for total irradiance and six for spectral irradiance were employed The instruments complemented each other in the measuring techniques employed and wavelength range covered and were calibrated and operated by different experimenters The combined results of these experiments are presented and also a proposed standard for the solar constant and zero air mass solar spectral irradiance The solar constant is found to equal 135.3 mW cm⁻² or 1.90 cal min⁻¹ cm⁻²

Astrophotography Siegfried Marx, 2012-12-06

This volume contains the proceedings of the workshop Astrophotography 87 which was held in Jena April 21 24 1987 The workshop was organized by the Central Institute of Astrophysics of the Academy of Sciences of the German Democratic Republic and is the latest in a series devoted to the problems of photography in astronomy The previous

workshops which have taken place every three years were held in Edinburgh 1984 Nice 1981 and Geneva 1978 For telescopes with large fields of view in particular Schmidt telescopes photographic plates are the only suitable radiation receiver Thus the efficiency of the photographic plate determines the quality of the observation The treatment of the plates in the photographic laboratory is also very important Additional factors affecting the scientific results are the measuring machines and the methods of interpretation All these topics were discussed in the workshop by the 62 participants 26 from the GDR and 36 from 13 other countries Thanks go to David Malin the chairman of the working group Astrophotography of the International Astronomical Union for writing an introductory article for the proceedings I am grateful to all participants who presented papers during the workshop for sending in their manuscripts on time Poster papers are arranged among the other papers according to the topics they treat All participants also wish to express their thanks to Springer Verlag for publishing the proceedings
