expressions do what you want them to do and avoid creating regular expressions that don't meet your intentions Beginning chapters introduce regular expressions and show you a method you can use to break down a text manipulation problem into component parts so that you can make an intelligent choice about constructing a regular expression pattern that matches what you want it to match and avoids matching unwanted text To solve more complex problems you should set out a problem definition and progressively refine it to express it in English in a way that corresponds to a regular expression pattern that does what you want it to do The second part of the book devotes a chapter to each of several technologies available on the Windows platform You are shown how to use each tool or language with regular expressions for example how to do a lookahead in Perl or create a named variable in C Regular expressions can be useful in applications such as Microsoft Word OpenOffice.org Writer Microsoft Excel and Microsoft Access A chapter is devoted to each In addition tools such as the little known Windows findstr utility and the commercial PowerGrep tool each have a chapter showing how they can be used to solve text manipulation tasks that span multiple files The use of regular expressions in the MySQL and Microsoft SQL Server databases are also demonstrated Several programming languages have a chapter describing the metacharacters available for use in those languages together with demonstrations of how the objects or classes of that language can be used with regular expressions The languages covered are VBScript Javascript Visual Basic .NET C PHP Java and Perl XML is used increasingly to store textual data The W3C XML Schema definition language can use regular expressions to automatically validate data in an XML document W3C XML Schema has a chapter demonstrating how regular expressions can be used with the xs:pattern element Chapters 1 through 10 describe the component parts of regular expression patterns and show you what they do and how they can be used with a variety of text manipulation tools and languages You should work through these chapters in order and build up your understanding of regular expressions The book then devotes a chapter to each of several text manipulation tools and programming languages These chapters assume knowledge from Chapters 1 through 10 but you can dip into the tool specific and language specific chapters in any order you want

Writing Apache Modules with Perl and C Lincoln Stein, Doug MacEachern, 1999 Apache is the most popular web server on the Internet because it is free reliable and extensible The availability of the source code and the modular design of Apache makes it possible to extend web server functionality through the Apache API For the most part however the Apache API has

only been available to C programmers and requires rebuilding the Apache server from source `mod_perl` the popular Apache module used primarily for enhanced CGI performance changed all that by making the Apache API available to Perl programmers With `mod_perl` it becomes simple to develop Apache modules with Perl and install them without having to rebuild the web server Writing Apache Modules with Perl and C shows how to extend web server capabilities regardless of whether the programming language is Perl or C The book explains the design of Apache `mod_perl` and the Apache API It then demonstrates how to use them to perform for tasks like the following Rewriting CGI scripts as Apache modules to vastly improve performance Server side filtering of HTML documents to embed special markup or code much like SSI Enhancing server log functionality Converting file formats on the fly Implementing dynamic navigation bars Incorporating database access into CGI scripts Customizing access control and authorization to block robots or to use an external database for passwords The authors are Lincoln Stein and Doug MacEachern Lincoln is the successful author of How to Set Up and Maintain a World Wide web Site and the developer of the widely used Perl CGI `pm` module Doug is a consultant and the creator of the innovative `mod_perl` Apache module
