

Chapter 1
Topic: Nervous System
Structure & Function
What the growth points for your brain tell Chapter 1: Nervous System

1. What are the main types of neurons? Neurons are specialized cells that transmit information in the nervous system. They are made up of a cell body (soma) and a long tail-like structure called an axon. The axon is covered by a myelin sheath, which helps to speed up the transmission of electrical signals.

2. How does the brain control the body's movements? The brain controls the body's movements by sending electrical signals through the nervous system to the muscles. These signals are called motor commands. The brain also receives information from the muscles about their position and movement, which it uses to adjust the commands.

3. What are the main parts of the brain? The brain is divided into three main parts: the cerebrum, the cerebellum, and the brainstem. The cerebrum is the largest part and is responsible for most of the brain's functions, including thinking, feeling, and controlling the body's movements. The cerebellum is a smaller part located at the back of the brain, and it is responsible for coordinating movement and balance. The brainstem is the part of the brain that connects the cerebrum and cerebellum to the rest of the nervous system.
