Rocket Science Mark Denny, Alan McFadzean, 2019-10-08 This is a book about rocket science what it is and what it does From the earliest fireworks to nuclear powered spacecraft all you would ever want or need to know about the subject is here along with a straightforward explanation of how why and when things work or sometimes don't We begin with the history and workings of early terrestrial rocketry before moving onto the main subject of the book how we get things into space and on occasion back again Entirely math free the chapters weave together innumerable anecdotes real world examples and easy walk throughs to help readers break down the complex physics behind some of humankind's most amazing feats Neither a pure textbook nor a populist space travel tome the book will educate inform and above all entertain anyone intrigued by rocket science

Beyond the Saga of Rocket Science Walter Sierra, 2016-12-19 Beyond the Saga of Rocket Science is a series of four closely related books that provide an amply illustrated overarching perspective to a broad nontechnical audience of the entire panorama surrounding the development of rockets missiles and space vehicles as we know them today and what the exciting future holds The books are sequential and form an integrated whole The Dawn of the Space Age Avoiding Armageddon In Space To Stay The Never Ending Frontier The Dawn of the Space Age begins with exciting tales of the earliest developers of rudimentary rockets and the deadly battles they fought in China between 228 and 1600 A D A historical fiction approach brings long ago characters and events to life Palace intrigues treachery and warmongering are interwoven with vivid depictions of courage and bravery to showcase the gradual progression of the science of rocketry from fireworks displays to effective weapons in the battlefield Readers in the West will learn something about the Eastern mindset where over half the world's population lives today The tremendous achievements of the Wright Brothers Wilbur and Orville in the early 1900s serve as a useful backdrop for showcasing the difficulties in developing completely new technologies for practical use The Wright Brothers had to go abroad to France before World War I to garner enough support and funding to mature airplane science to the point that the U S Army took notice Building on the Wrights successes Ludwig Prandtl in Germany and Theodore von Kármán in the United States made pioneering developments in aerodynamics which are crucial to rocket flight The invention of the airplane inspired early innovators in the 1920s 1930s to lay the foundation for the giant aerospace conglomerates of today including William Boeing Boeing Company Allan Loughead and Glenn Martin Lockheed Martin Jack Northrop and Leroy Grumman Northrop Grumman James McDonnell and Donald Douglas McDonnell Douglas These stalwarts were very foresighted and willing to take calculated risks The ingenious Dr Robert Goddard inventor of the modern rocket developed a sound theory and conducted pioneering flight tests in the 1920s 1930s while overcoming many failures However Goddard's rockets were not taken seriously enough in the United States to enable the development of practical missiles and launch vehicles But Germany sure took notice World War II gave the biggest impetus ever to advancing rocket science and related technologies The Nazi war machine funded Dr Wernher von Braun and his cohorts to develop

rocketdriven weapons such as the V1 and V2 which killed thousands during World War II Fortunately for America von Braun and key members of his team decided to seek asylum in the United States when the war ended Now the country took up the engineering of rockets in earnest Von Braun went on to lead the American space program during the crucial decades of the 1950s 1960s He did more to advance missiles rockets spaceflight and enable manned landings on the moon than anybody else in America Six astronauts flew solo on six Project Mercury flights 1961-1963 Three of them joined another 13 astronauts to orbit Earth on 10 twoperson Project Gemini flights 1965-1966 Without a single failure The Soviet Union captured their fair share of German rocketeers including the influential Helmut Grttrup They learned everything possible from the German expatriates Then they cast the Germans aside and undertook rocket and missile development using indigenous experts like Sergei Korolyov and Valentin Glushko Like von Braun Korolyov was ingenious in his own right and led the development of Soviet rocket science until his untimely death in January 1966 Engineers and scientists are todays unsung heroes They work in the shadows without any public acclaim or recognition yet the technologies they develop touch every facet of our daily lives

Press, 2016-01-15 This manual is designed for the use of hydrogen as a fuel in the fuel cells The turn of the century has seen a realization of moving towards clean energy due to a variety of considerations ranging from global warming anxiety to living in a healthy atmosphere depletion of fossil fuels oil slick in Gulf of Mexico resulting in disasters and so forth Innumerable debates in the literature has led to the identification of hydrogen as the safest and efficient fuel over the other available fuels This fuel can be used in two ways a direct combustion like gasoline and b fuel cells The use of it by the first method requires pure oxygen to be used for combustion it is an expensive method involving oxygen storage and transportation If oxygen is substituted by air in the combustion it produces nitrogen oxides that are defying the definition of clean energy The other method is to use it as a fuel cell for easy emission free transportation Here chemical energy is converted to electrical energy directly in a fuel cell To illustrate principles of related fuel cells methanol and borohydride fuel cells are included in this manual The nine experiments described here are designed for illustrating the concepts for the beginners and those motivated to go for clean energy DVD displays the actual experimental set up and measurement procedures for Hydrogen safety Fuel value measurement Gaseous properties of hydrogen Proton exchange membrane fuel cell assembly and Dissolved methanol fuel cell
