A proficient student can describe how the different types of rocks are formed. They can explain the rock cycle, and they can contrast mechanical weathering, chemical weathering, and erosion.

1. How are rocks and minerals related?
 - a. Rocks are made of minerals
2. Name the 3 main types of rocks and explain how they are formed?
 - a. Igneous rocks-formed from the cooling of magma or lava
 - b. Sedimentary rocks-formed when particles of other rocks or the remains of plants and animals are pressed and cemented together
 - c. Metamorphic rocks-formed when heat, pressure or chemical reactions change rocks from one type to another
3. What is the difference between an intrusive igneous rock and an extrusive igneous rock?
 - a. Intrusive igneous rocks form when magma cools below Earth's surface
 - b. Extrusive igneous rocks form when lava cools on Earth's surface
4. Name and describe the steps that are necessary for a sedimentary rock to form.
 - a. Erosion-the sediment is removed by wind, water, ice or gravity
 - b. Deposition-the sediment particles settle out of the air or water and pile on top of each other
 - c. Compaction-the weight of the sediment particles piling on top of each other squeezes them together
 - d. Cementation-the mineral particles dissolve in water and the dissolved minerals mixed with the rock particles act as glue to bind the particles together
5. What is the difference between weathering and erosion?
 - a. Weathering is the process that breaks down rocks and other substances at Earth's surface
 - b. Erosion is the removal of rock particles by wind, water, ice and gravity
6. What is the difference between mechanical weathering and chemical weathering?
 - a. Mechanical weathering is the type of weathering where rocks are physically broken into smaller pieces
 - b. Chemical weathering is the process that breaks down rock through chemical changes
7. Name and describe the 5 forces that cause mechanical weathering.
 - a. Freezing and thawing-water seeps into cracks in rocks, freezes, expands, and acts like a wedge to push the rock apart
 - b. Release of Pressure-as erosion removes material from the rock's surface, the pressure on the rock goes down, and that release of pressure makes the outside of the rock crack and flake off
 - c. Animal Actions-burrowing animals loosen and break rocks apart in the soil
 - d. Plant Growth-roots of trees and plants enter the cracks in rocks, then as they grow, they force the cracks farther apart
 - e. Abrasion-Sand and other rock particles that are carried by wind, water or ice can wear away exposed rock surfaces like sandpaper rubbing against wood
