**Early Childhood Education** Petr G. Grotewell, Yanus R. Burton, 2008 This book focuses on early childhood education which spans the human life from birth to age 8 Infants and toddlers experience life more holistically than any other age group Social emotional cognitive language and physical lessons are not learned separately by very young children Adults who are most helpful to young children interact in ways that understand that the child is learning from the whole experience not just that part of the experience to which the adult gives attention Although early childhood education does not have to occur in the absence of the parent or primary caregiver this

term is sometimes used to denote education by someone other than these the parent or primary caregiver Both research in the field and early childhood educators view the parents as an integral part of the early childhood education process Early childhood education takes many forms depending on the theoretical and educational beliefs of the educator or parent Other terms that is often used interchangeably with early childhood education are early childhood learning early care and early education Much of the first two years of life are spent in the creation of a child s first sense of self or the building of a first identity Because this is a crucial part of children s makeup how they first see themselves how they think they should function how they expect others to function in relation to them early care must ensure that in addition to carefully selected and trained caregivers links with family home culture and home language are a central part of program policy If care becomes a substitute for rather than a support of family children may develop a less than positive sense of who they are and where they come from because of their child care experience

insights that child observation can bring to practice with children and families and helps the reader develop their own skills in this approach. The ability to observe and to process what is seen is crucial in social work with children and families. Yet successive inquiries into child deaths have demonstrated the problems faced by professionals in doing what is superficially a very straightforward task: highlighting the difficulties in seeing, thinking about, and developing an understanding of the child's experience. This book helps readers to develop an understanding of what is entailed in observation, explaining the unique insights that child observation can bring to practice with children and families. By drawing out relevant theoretical concepts, it aids their understanding of what they are observing and so helps them to develop their own skills. Key theoretical concepts are brought together from developmental psychology and psychoanalytic thinking in a way that enables practitioners to draw on these to inform and enrich their thinking. Useful case studies are presented which practitioners can relate to their own practice when they are struggling to make sense of difficult situations. School Services for Children of Working Mothers

,1943 *Social and Emotional Prevention and Intervention Programming for Preschoolers* Susanne A. Denham, Rosemary Burton, 2012-12-06 *Social and Emotional Prevention and Intervention Programming for Preschoolers* rests on the idea that young children under optimal circumstances develop substantial abilities in social and emotional domains by the time they enter school. These abilities contribute to their success and well-being during these early years but even more importantly to both their successful adaptation to school, personal and academic, and their long-term mental health. The chapters of this volume present theoretical foundations for and explanations of what important adults in young children's lives—preschool teachers, daycare providers, parents—can do to encourage the development of such social-emotional abilities, including promoting secure attachment relationships, providing positive behavior guidance, and assisting children in developing emotion knowledge, emotion regulation, social problem-solving skills, and other positive social behaviors. In addition, the book reviews the current state of early childhood programming in each of these crucial areas, with the addition of a chapter on emergent parent programming on emotion coaching. Recommendations are made for making such programming work for assessing individual children's development and program efficacy, and necessary future directions for this area are detailed.
