Weideman, John Read, Theo du Plessis, 2020-11-02 South African universities face major challenges in meeting the needs of  
their students in the area of academic language and literacy The dominant medium of instruction in the universities is  
English and to a much lesser extent Afrikaans but only a minority of the national population are native speakers of these  
languages Nine other languages can be media of instruction in schools which makes the transition to tertiary education  
difficult enough in itself for students from these schools The focus of this book is on procedures for assessing the academic  
language and literacy levels and needs of students not in order to exclude students from higher education but rather to  
identify those who would benefit from further development of their ability in order to undertake their degree studies  
successfully The volume also aims to bring the innovative solutions designed by South African educators to a wider  
international audience Academic Language in Diverse Classrooms: Mathematics, Grades 6-8 Margo Gottlieb, Gisela  
Ernst-Slavit, 2013-05-01 Help your students unlock important mathematical concepts If you ve ever watched a student  
struggle with learning math concepts you know that academic English can sometimes create stumbling blocks to  
understanding To grasp complicated concepts build skills and demonstrate achievement students need to master academic

growth in the technology available to the collision analyst changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include Night Vision Study and Photogrammetry, Vehicle Event Data Recorders, Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction. The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction, appealing to crash analysts, consultants and safety engineers alike.
