

I. Web tag

- a. Transforming nursing education through the use of unfolding clinical reasoning case studies

II. Mission

- a. To promote excellence in nursing education by emphasizing the three C's: Caring, Critical thinking and Clinical reasoning. Caring behaviors can be developed through the application of Kristen Swanson's Middle Range Theory of Caring in the clinical setting (see "Swanson Caring" tab).
- b. Critical thinking and clinical reasoning can be developed through incorporating med/surg unfolding clinical reasoning case studies in the classroom as advocated by Benner in her latest work, "Educating Nurses-A Call for Radical Transformation". These case studies teach how a nurse thinks in the clinical setting so that the patient and their needs become the primary subject of all that is done in nursing and nursing education.

III. Purpose

#1. To realize the vision of Benner's latest work; "Educating Nurses: A Call to Radical Transformation", with an emphasis on unfolding clinical reasoning case studies that will result in facilitating the following needed changes in nursing education:

Contextualize student learning

Shift from a focus on covering decontextualized knowledge from a textbook only, to an emphasis on teaching what data is relevant, rationale for medications and treatment, and the nursing interventions/priorities required in a particular situation as the patient is cared for and their status changes. The practice of nursing is taught most effectively when it is learned in context.

Integrate classroom & clinical

Bridge the theory/clinical divide by connecting classroom and clinical learning. The centrality and responsibilities of the nurse-patient relationship are reinforced as students respond and become better prepared to face the ever changing dynamics seen in the clinical setting.

Emphasize clinical reasoning

This includes multiple ways of looking at a patient scenario and the thinking required by the nurse. This includes critical reflection, analysis, critical thinking and situated learning. Learning is facilitated in situations that involve specific patients clinically or in unfolding case studies in the classroom.

Encourage Clinical Imagination

Clinical imagination happens when the educator provides enough background information to allow the student to imagine, empathize and experience what is at stake for the patient as the case study unfolds. This allows students to acquire knowledge to imagine situations and rehearse them before they experience the high stakes in the clinical setting.
