Association, Information Resources, 2017-03-03 Emerging innovations in the medical sector have created new opportunities
for improved patient care and disease control By optimizing current practices and procedures improvements in healthcare
delivery and quality can be achieved Oral Healthcare and Technologies Breakthroughs in Research and Practice is a
comprehensive resource with the latest scholarly perspectives on the technological advancements and real world
applications for oral hygiene and medical care Featuring extensive coverage across a range of relevant perspectives and
topics such as disease management healthcare administration and medical informatics this multi volume book is ideally
designed for professionals researchers students and practitioners seeking academic material on developments and
innovations in oral medicine Library Trends , 1999 Books in Print , 1977 **Using Neurophysiological Signals that
Reflect Cognitive or Affective State** Anne-Marie Brouwer, Thorsten O. Zander, Jan B. F. van Erp, 2015-07-27 What can we
learn from spontaneously occurring brain and other physiological signals about an individual s cognitive and affective state
and how can we make use of this information One line of research that is actively involved with this question is Passive Brain
Computer Interfaces BCI To date most BCIs are aimed at assisting patients for whom brain signals could form an alternative
output channel as opposed to more common human output channels like speech and moving the hands However brain signals
possibly in combination with other physiological signals also form an output channel above and beyond the more usual ones
they can potentially provide continuous online information about an individual s cognitive and affective state without the
need of conscious or effortful communication The provided information could be used in a number of ways Examples include
monitoring cognitive workload through EEG and skin conductance for adaptive automation or using ERPs in response to
errors to correct for a behavioral response While Passive BCIs make use of online neuro physiological responses and close
the interaction cycle between a user and a computer system neuro physiological responses can also be used in an offline
fashion Examples of this include detecting amygdala responses for neuromarketing and measuring EEG and pupil dilation as
indicators of mental effort for optimizing information systems The described field of applied neuro physiology can strongly
benefit from high quality scientific studies that control for confounding factors and use proper comparison conditions
Another area of relevance is ethics ranging from dubious product claims acceptance of the technology by the general public
privacy of users to possible effects that these kinds of applications may have on society as a whole In this Research Topic we

aimed to publish studies of the highest scientific quality that are directed towards applications that utilize spontaneously effortlessly generated neurophysiological signals brain and or other physiological signals reflecting cognitive or affective state We especially welcomed studies that describe specific real world applications demonstrating a significant benefit compared to standard applications We also invited original new kinds of proposed applications in this area as well as comprehensive review articles that point out what is and what is not possible according to scientific standards in this field Finally we welcomed manuscripts on the ethical issues that are involved Connected to the Research Topic was a workshop held on June 6 during the Fifth International Brain Computer Interface Meeting June 3 7 2013 Asilomar California that brought together a diverse group of people who were working in this field We discussed the state of the art and formulated major challenges as reflected in the first paper of the Research Topic
