|                             |                                                                                                                                                                                                 |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Loudness                    | the perceptual attribute of a sound that relates to its intensity (SPL)                                                                                                                         |
| equal loudness contour      | a curve plotting the SPLs of sounds at different frequencies that produce a loudness match with a reference sound at a fixed frequency and SPL                                                  |
| excitation pattern model    | a theory of loudness perception in which the loudness of a sound is proportional to the summed neural activity it evokes in the auditory nerve                                                  |
| pitch                       | the perceptual attribute of a sounds that relates to its frequency                                                                                                                              |
| masking                     | an experimental effect in which a subject's ability to detect a sound signal is impaired in the presence of noise                                                                               |
| band pass noise             | a sound stimulus containing equal energy within a certain band of frequencies above and below its center frequency                                                                              |
| critical band masking       | an experimental effect in which masking of a sinusoidal signal occurs only when the center frequency of the noise falls within a certain band of frequencies surrounding the signal             |
| place theory                | a theory of pitch perception, according to which pitch is determined by the place of maximum excitation on the basilar membrane                                                                 |
| timing theory               | a theory of pitch perception, according to which pitch is determined by the timing of neural impulses in the auditory nerve                                                                     |
| missing fundamental wave    | a complex wave from which the fundamental frequency has been removed                                                                                                                            |
| beat                        | regular changes in the amplitude of a wave when two or more sine waves at different frequencies are added together                                                                              |
| residue pitch               | the pitch heard in a complex wave as a result of beats rather than resolvable harmonic components                                                                                               |
| pattern theory              | a theory in complex sounds, according to which pitch is determined by the harmonic series that best fits the pattern of frequencies in a sound                                                  |
| minimum audible angle (MAA) | the smallest change in the azimuth angle of a sound source that can be detected reliably                                                                                                        |
| duplex theory               | a theory of auditory localization in which low frequency sounds are localized using interaural time differences, and high frequency sounds are localized using interaural intensity differences |
| cone of confusion           | a cone of space extended from a listener's head, defining the directions that produce the same interaural time difference and are therefore confusable                                          |
| precedence effect           | a phenomenon in which apparent sound source direction is determined by the earliest sound to arrive at the ear                                                                                  |
| formant frequency           | the distinctive frequency at which the vocal tract (tube of air between larynx and lips) vibrates to create a certain vowel sound                                                               |
| speech mode                 | a mode of auditory processing that is specialized for processing speech sounds                                                                                                                  |
| categorical perception      | each stimulus is perceived as a member of a discrete category, in an all-or-nothing fashion, rather than as a value along a continuous dimension                                                |
| phoneme boundary            | a format frequency defining the boundary at which perception switches from one phoneme to another                                                                                               |
| Wernicke's area             | an area in the left hemisphere of the human cortex where damage results in disordered speech perception (aphasia)                                                                               |
| conductive hearing loss     | deafness caused by impaired conduction of sound energy by the outer and middle ear                                                                                                              |
