Property Rights in Outer Space Matthew Johnson, 2024-05-28 This book explores the role of private mining rights in the utopian imaginary of space colonisation It presents a transdisciplinary account of the new and evolving legislative frameworks that have been established in anticipation of commercial exploitation of the mineral resources of the off world frontier Written in an engaging style the book investigates a novel case study in the history of capitalism and the commons the emergence of a nascent space mining industry undergirded by a contentious legislative framework In 2015 the US passed laws that would recognise the claims of US corporations to own and sell space resources This unilateral act of pre emptive law making would appear to contravene the terms of the UN Outer Space Treaty 1967 which declared that the exploration and use of outer space should be for the benefit of all mankind and not subject to national appropriation Using this central dynamic between privately held mining rights and outer space as a global commons Matthew Johnson constructs an historical sociology of space mining from the deep historical roots of common and private property to the contemporary networks of neoliberalism that have engaged with the commercialisation of space activity The anticipatory expansion of private property claims beyond the Earth both resonates with and problematises the terrain of political history such as the tensions between states and markets public law and private power the commons and exclusive property The emerging cosmopolitics of off world private property mirrors and is often explicitly embedded within neoliberal geopolitics prompting urgent questions about how we can reaffirm principles of democracy and common heritage in the international laws of Earth and space This book is compelling reading for anyone interested in the social study of space law economics technology politics and property rights

**Forging a Socio-Legal Approach to Environmental Harms** Tiffany Bergin,Emanuela Orlando,2017-06-14

Environmental harms exert a significant toll and pose substantial economic costs on societies around the world. Although such harms have been studied from both legal and social science perspectives, these disciplinary specific approaches are not on their own fully able to address the complexity of these environmental challenges. Many legal approaches, for example, are limited by their inattention to the motivations behind environmental offences, whereas many social science approaches are hindered by an insufficient grounding in current legislative frameworks. This edited collection constitutes a pioneering attempt to overcome these limitations by uniting legal and social science perspectives. Together, the book's contributors forge an innovative socio-legal approach to more effectively respond to and to prevent environmental harms around the world. Integrating theoretical and empirical work, the book presents carefully selected illustrations of how legal and social science scholarship can be brought together to improve policies. The various chapters examine how a socio-legal approach can ultimately lead to a more comprehensive understanding of environmental harms as well as to innovative and effective responses to such environmental offences.

**The Vortex** Frank Uekötter, 2024-04-18

Environmental challenges are defining the twenty-first century. To fully understand ongoing debates about our current crises—climate change, loss of biological diversity, pollution, extinction, resource woes—means revisiting their origins in all their complexity. With this ambitious, highly original contribution to the environmental history of global modernity, Frank Uekötter considers the many ways humans have had an impact on their physical environment throughout history. Ours is not a one-way trajectory to sudden collapse, he argues, but rather death by a thousand cuts. The many paths we've forged to arrive in our current predicament, from agriculture to industry to infrastructure, must be considered collectively if we are to stay afloat in what Uekötter describes as a vortex, a powerful metaphor for the flow of history capturing the momentum and the many crosscurrents that swept people and environments along. His book invites us to look at environmental challenges from multiple perspectives, including all the twists and turns that have helped to create the mess we find ourselves in. Uekötter has written a world history for an age where things are falling apart, where we know what lies ahead and are equipped with the right tools, technological and otherwise, and plenty of experience to deal with environmental challenges but somehow fail to get our affairs in order.
