

Section 1 Electric Charge

Underlined words and phrases are to be filled in by students on the Note-taking Worksheet.

- A. Protons have positive electric charge; electrons have negative electric charge.
1. In most atoms, the charges of the protons and electrons cancel each other out and the atom has no net charge.
 2. Atoms become charged by gaining or losing electrons.
 3. **Static electricity**—the accumulation of excess electric charges on an object
- B. Electrically charged objects obey the following rules:
1. **Law of conservation of charge**—charge may be transferred from object to object, but it cannot be created or destroyed
 2. Opposite charges attract, and like charges repel.
 3. Charges can act on each other even at a distance, because any charge that is placed in an electric field will be pushed or pulled by the field.
 4. Electrons move more easily through **conductors**, like metals.
 5. Electrons do not move easily through **insulators**, such as plastic, wood, rubber, and glass.
- C. Transferring electric charge
1. Charging by contact
 - a. The process of transferring charge by touching or rubbing
 - b. Example: static electricity from your feet rubbing the carpet
 2. Charging by induction
 - a. The rearrangement of electrons on a neutral object caused by a nearby charged object
 - b. Example: a negatively charged balloon near your sleeve causes an area of your sleeve to become positively charged
 3. Static discharge
 - a. A transfer of charge through the air between two objects because of a buildup of static electricity
 - b. Example: lightning
 4. **Grounding**—using a conductor to direct an electric charge into the ground
- D. The presence of electric charges can be detected by an electroscope.

DISCUSSION QUESTION:

What do you think happens when you get static electricity in your hair? *Usually this happens after your hair rubs against something like a sweater or a hairbrush. Some electrons from your hair move to the sweater or hairbrush, causing the sweater or hairbrush to have a negative charge, and your hair to have a positive charge. Your hair will be attracted to the sweater or hairbrush. Strands of hair that are positively charged also might repel one another and lift straight up in the air.*

Science Explorer Physical Science Michael J. Padilla, Ioannis Miaculis, Martha Cyr, *Focus on physical science* Charles H. Heimler, 1989 PRINCIPLES OF PHYSICS P. V. NAIK, 2012-06-12 This well received book now in its fifth edition presents the subject matter in a pedagogically sound manner with focus on teaching problem solving The specific needs of these students have influenced the selection of topics for inclusion in the book The book provides students with a solid understanding of the fundamental concepts with due emphasis on developing skills to solve exercise problems aimed at both testing and extending the knowledge of the students Divided into 23 chapters the book comprises topics on four major areas mechanics optics electricity and electronics and modern physics including quantum mechanics and lasers In this fifth edition two new chapters on Acoustics and Heat and Thermodynamics are incorporated to widen the coverage and enhance the usefulness of this text This book is intended for the undergraduate students of physics as well as for the first year engineering students of several disciplines **Addison-Wesley Introduction to Physical Science** Michael B. Leyden, 1988 **A Text-book of Physics for the Use of Students of Science and Engineering** John Duncan, Sydney George Starling, 1920 **Gas World**, 1908 **The Electrical World and Engineer**, 1901 **Electrical Engineering**, 1914 **The Interior**, 1905 Issues for Jan 12 1888 Jan 1889 include monthly Magazine supplement *Resources in Education*, 1997 **Scientific American**, 1899 The Bookseller and the Stationery Trades' Journal, 1923 **Metastasis and Metastability** Kane X. Faucher, 2013-11-19 The word information carries a number of connotations depending on context and can be said to be one of the most problematic words to define despite many efforts by statistical theorists mathematicians physicists cyberneticians communication theorists computer scientists and philosophers Is information physical or non physical Is the universe digital analog or a chaotic mixture of the two This book explores a Deleuzian way of understanding information by retracing Deleuze's ontology of difference back to Gilbert Simondon's concepts of transduction metastability and perpetual individuation as a source for Deleuze's concept of the virtual Although Deleuze did not address information specifically in his oeuvre this book attempts to construct what a Deleuzian theory of information might look like as a consequence of his philosophical insights The reader is presented with a brief survey of information theories capsule explanations of the philosophy of Gilbert Simondon and Gilles Deleuze and a discussion on the roles of metastasis and metastability as a means of addressing the problematic known as information outside of computing regimes and as a critique of cybernetics informatics and memetics Can information be reconfigured as affirmative difference transformed into a nomad science or must it remain consigned to the realm of probabilism *The Examiner*, 1864 *The Electrical Journal*, 1879 **Electrical Experimenter**, 1920 *Just in Time Teaching* Scott Simkins, Mark Maier, 2023-07-03 *Just in Time Teaching* JiTT is a pedagogical approach that requires students to answer questions related to an upcoming class a few hours beforehand using an online course management system While the phrase just in time may evoke shades of slap

dash work and cut corners JiTT pedagogy is just the opposite It helps students to view learning as a process that takes time introspection and persistence Students who experience JiTT come to class better prepared and report that it helps to focus and organize their out of class studying Their responses to JiTT questions make gaps in their learning visible to the teacher prior to class enabling him or her to address learning gaps while the material is still fresh in students minds hence the label just in time JiTT questions differ from traditional homework problems in being designed not only to build cognitive skills but also to help students confront misconceptions make connections to previous knowledge and develop metacognitive thinking practices Students consequently spend more time on course concepts and ideas but also read their textbooks in ways that result in more effective and deeper learning Starting the class with students work also dramatically changes the classroom learning environment creating greater student engagement This book demonstrates that JiTT has broad appeal across the academy Part I provides a broad overview of JiTT introducing the pedagogy and exploring various dimensions of its use without regard to discipline Part II of the book demonstrates JiTT s remarkable cross disciplinary impact with examples of applications in physics biology the geosciences economics history and the humanities Just in Time Teaching article from The Hispanic Outlook in Higher Education Reprinted with permission from Hispanic Outlook in Higher Education Magazine www.hispanicoutlook.com
