Face: Selected Correspondence Of Sidney Coleman Aaron Sidney Wright, Diana Coleman, David Kaiser, 2022-08-18

Sidney Coleman 1937 2007 was a renowned theoretical physicist who taught for more than forty years at Harvard University. He contributed critical work on quantum field theory, high energy particle physics, and cosmology. He was also a remarkably effective teacher who introduced generations of physicists to quantum field theory, mentoring several leading members in the field. His sense of humor and wit became legendary. This selection of his previously unpublished correspondence illuminates changes in theoretical physics and in academic life over the course of Coleman's illustrious career. The letters show the depth of Coleman's activities and interests, including science fiction, space travel, and the US counter culture. The volume also includes Coleman's legendary lecture "Quantum Mechanics in Your Face" *NASA Technical Memorandum*, 1991.

Recollections of "Tucson Operations" M.A. Gordon, 2006-03-30. A personal account of the evolution of millimeter wave astronomy at the US National Radio Astronomy Observatory. The author recounts the behind-the-scenes activities of the staff from the beginnings at Kitt Peak to the closing of the Tucson offices.

Nuclear Power National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Energy Engineering Board, Committee on Future Nuclear Power Development, 1992-02-01. The construction of nuclear power plants in the United States is stopping as regulators, reactor manufacturers, and operators sort out a host of technical and institutional problems. This volume summarizes the status of nuclear power, analyzes the obstacles to resumption of construction of nuclear plants, and describes and evaluates the technological alternatives for safer, more economical reactors. Topics covered include institutional issues, including regulatory practices at the federal and state levels; the growing trends toward greater competition in the generation of electricity; and nuclear and nonnuclear generation options. Critical evaluation of advanced reactors, covering attributes such as cost, construction time, safety, development status, and fuel cycles. Finally, three alternative federal research and development programs are presented.

Freedom's Laboratory Audra J. Wolfe, 2020-08-04. The Cold War ended long ago, but the language of science and freedom continues to shape public debates over the relationship between science and politics in the United States. Scientists like to proclaim that science knows no borders. Scientific researchers follow the evidence where it leads, their conclusions free of prejudice or ideology. But is that really the case? In *Freedom's Laboratory*, Audra J. Wolfe shows how these ideas were tested to their limits in the high-stakes propaganda battles of the Cold War. Wolfe examines the role that scientists, in concert with administrators and policymakers, played in American cultural diplomacy after World War II. During this period, the engines of US propaganda promoted a vision of science that highlighted empiricism, objectivity, a commitment to pure research, and internationalism. Working both overtly and covertly, wittingly and unwittingly, with governmental and private organizations, scientists attempted to decide what exactly they meant when they referred to scientific freedom or the US ideology. More frequently, however, they defined American science merely as the opposite of Communist science.

Uncovering many startling episodes of the close relationship between the US government and private scientific groups Freedom s Laboratory is the first work to explore science s link to US propaganda and psychological warfare campaigns during the Cold War Closing in the present day with a discussion of the 2017 March for Science and the prospects for science and science diplomacy in the Trump era the book demonstrates the continued hold of Cold War thinking on ideas about science and politics in the United States **Chemical News and Journal of Physical Science** ,1895 Chemical News and Journal of Industrial Science ,1923 **Deadly Cultures** Mark Wheelis,2006-01-30 Deadly Cultures offers an historical analysis of biological weapons since 1945 and addresses three central issues why states have continued or begun programs for acquiring biological weapons why states have terminated such programs and how states have demonstrated that they have truly terminated their biological weapons programs **The Chemical News and Journal of Industrial Science** ,1923 **Telegraphic Journal and Monthly Illustrated Review of Electrical Science** ,1923 **The Chemical News and Journal of Physical Science** ,1895 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1971 First multi year cumulation covers six years 1965 70 Journal of Education ,1914 *The Journal of Education* ,1895
