Analytic Research Foundations for the Next-Generation Electric Grid National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Analytical Research Foundations for the Next-Generation Electric Grid, 2016-05-15 Electricity is the lifeblood of modern society and for the vast majority of people that electricity is obtained from large interconnected power grids However the grid that was developed in the 20th century and the incremental improvements made since then including its underlying analytic foundations is no longer adequate to completely meet the needs of the 21st century The next generation electric grid must be more flexible and resilient While fossil fuels will have their place for decades to come the grid of the future will need to accommodate a wider mix of more intermittent generating sources such as wind and distributed solar photovoltaics Achieving this grid of the future will require effort on several fronts There is a need for continued shorter term engineering research and development building on the existing analytic foundations for the grid But there is also a need for more fundamental research to expand these analytic foundations Analytic Research Foundations for the Next Generation Electric Grid provide guidance on the longer term critical areas for research

in mathematical and computational sciences that is needed for the next generation grid. It offers recommendations that are designed to help direct future research as the grid evolves and to give the nation's research and development infrastructure the tools it needs to effectively develop, test, and use this research. **Urban Geology** Pradeep Bhaskarrao

Jadhav, 2025-09-26 This book presents the result of an innovative challenge to create a systematic literature overview driven by machine-generated content. Questions and related keywords were prepared for the machine to query, discover, collate, and structure by Artificial Intelligence (AI) clustering. The AI-based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex interdisciplinary and multidisciplinary, for example, climate, planetary, and evolution sciences. Springer Nature has published much on these topics in its journals over the years, so the challenge was for the machine to identify the most relevant content and present it in a structured way that the reader would find useful. The automatically generated literature summaries in this book are intended as a springboard to further discoverability. They are particularly useful to readers with limited time looking to learn more about the subject quickly and especially if they are new to the topics. Springer Nature seeks to support anyone who needs a fast and effective start in their content discovery journey, from the undergraduate student exploring interdisciplinary content to Master or PhD thesis developing research questions to the practitioner seeking support materials. This book can serve as an inspiration to name a few examples. It is important to us as a publisher to make the advances in technology easily accessible to our authors and find new ways of AI-based author services that allow human-machine interaction to generate readable, usable, collated research content. *Our Energy Future*

Don E. Albrecht, 2014-07-25 Rapid changes in energy production and consumption are having major socioeconomic implications for the communities of rural America. Technological developments in horizontal drilling, hydraulic fracturing, fracking, nuclear energy, biofuels, wind, and solar energy have significantly increased domestic energy production, and the production of energy from renewable sources has encouraged energy efficiency. Yet severe concerns persist, and policy decisions on energy issues will have profound implications for all Americans and rural communities where consequences are experienced most directly. Thus, the time is appropriate for a careful exploration of the socioeconomic implications of our energy future. The purpose of this book is to present timely and scientifically sound information on energy policy, socioeconomic aspects of energy production and consumption, with a focus on rural areas. The book presents the latest research by top scholars with the goal of clarifying options and providing the basis for informed policy decisions.
