

*Therapist:* [. . .] Well, good afternoon. Is it the first time you have come to this therapy center?

*Client:* Hmmm.

*Therapist:* Hmmm, yes, I don't know if you have an idea about where you are or how a therapy center works?

*Client:* Na, no, not really. It is just the doctor who gave me this address and telephone number. The lady just said that I had to come here at this time and for the rest . . . .

*Therapist:* Oh, yes, OK. (00.45)

Maybe I will briefly explain about this center and how it works and, euh, maybe if you also . . . euh, you can pose me the question you have . . .

*Client:* Ah yes, OK.

(00.45)

I feel tense. I think to make a good statement that the client feels as much as possible

P Twohig, 2008-03-31 Trichotillomania TTM is a complex disorder that is difficult to treat as few effective therapeutic options exist. Behavior therapy has the greatest empirical support but the number of mental health providers familiar with TTM and its treatment is quite small. This manual was written as a tool for therapists to become familiar with an effective treatment for TTM. The treatment approach described in this guide blends traditional behavior therapy elements of habit reversal training and stimulus control techniques with the more contemporary behavioral elements of Acceptance and Commitment Therapy (ACT). Unlike traditional interventions that aim to change type or frequency of pulling-related cognitions in the hopes of reducing urges to pull hair, this innovative program uses strategies to change the function of these cognitions. Clients are taught to see urges for what they really are and to accept their pulling-related thoughts, feelings, and urges without fighting against them. This is accomplished through discussions about the function of language and defusion exercises that show the client how to respond to thoughts about pulling less literally. Over the course of 10 weeks, clients learn to be aware of their pulling and warning signals, use self-management strategies for stopping and preventing pulling, stop fighting against their pulling-related urges and thoughts, and work toward increasing their quality of life. Self-monitoring and homework assignments keep clients motivated and engaged throughout. Designed to be used with older adolescents and adults, this innovative intervention has proven efficacy and is sure to be a powerful tool for the clinician who treats TTM.

**Overcoming Insomnia** Jack D. Edinger, Colleen Carney, Colleen E. Carney, 2008-03-27 This treatment program uses cognitive behavioral therapy methods to correct those poor sleep habits. CBT has been proven in multiple studies to improve sleep hygiene by reducing time spent in bed before sleep onset, reducing time spent awake after first sleep onset, and increasing the quality and efficiency of sleep. Developed by the authors, this evidence-based treatment can be used for both primary and secondary insomnia sufferers. Patients are first given information about healthy sleep and the reasons for improving sleep habits; then a behavioral program is developed to address that patient's specific sleep problems. Use of sleep logs, assessment forms, and other homework all provided in the corresponding workbook allows client and therapist to work together to develop an effective sleep regimen tailored specifically for each client. Finally, several sessions are dedicated to increasing compliance.
