Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 15 women, 40 to 50 years of age, who were sedentary and had no cardiovascular or other medical problems. The subjects were randomly assigned to a 10-week training program or a control group. The training program consisted of three sessions per week of aerobic exercise at 60% of maximum HR. The control group did not exercise. The subjects were monitored for HR and EE during the training program and for 10 weeks after the training program. The results showed that the training program had a significant effect on HR and EE. The HR of the training group decreased significantly during the training program and remained lower than the control group for 10 weeks after the training program. The EE of the training group increased significantly during the training program and remained higher than the control group for 10 weeks after the training program. The results suggest that a 10-week training program can have a significant effect on HR and EE in sedentary, middle-aged women.

23. Before completing a cash-invested A/R, we documented your feedback as follows: [Feedback](#)
24. If you identify the A/R as a cash-invested activity, add a note to the cash-investing form. If you do not wish to add a note, a "Declining" status will be applied to the investment. This is not sufficient. This investment will be purchased. This type of cash-invested A/R, as pointing out the group's approach, is good.
25. Do not include the A/R of your team, a P/A document.
26. Documentations for cash-invested A/R are shown in the table on the [Cash-Invested A/R](#) page.

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or other light sources. To avoid this, there are two things the patient should do:
 - Avoid exposure to bright light at night
 - Avoid exposure to bright light during the day
- The end of the day is a good time to go to bed. The patient should go to bed at the same time every day. The patient should avoid going to bed at the same time every day. The patient should avoid going to bed at the same time every day.
