

Tornado Scientists

by Christopher

Tornadoes form when swirling winds spin. Wind is invisible, but air can see formations themselves that spinning wind picks up dust, dirt, and debris. This swirling wind forms a funnel that resembles a giant vacuum cleaner sucking up the ground.

When a tornado is close, people run. They can see over 200 miles per hour wind speeds as fast as airplanes. As they move across the land, they can easily pick up cars, houses, and even people. Scientists observe these storms every day. It is important to find a safer place to take shelter if a tornado gets close.

A safe place could be a basement or first floor room, depending on where you are. If you are in a house without a basement, try to find a low-lying area without windows or doors in the middle of your house. You should put up with additional emergency preparedness with your house. Stay in a safe place until the storm passes.

Most people don't know how to get out of a tornado. They don't understand what to do to stay safe about tornadoes. There are many ways to stay safe and get out of a tornado if possible. They use special equipment and tools to measure and track the weather in and around a tornado.
